

Data Modernization Workshop

Unlock the value of your data.

Analytics is all about bringing your data together and focusing on what matters to your organization. Using advanced Azure data services coupled with foundational best practices accelerates “Smart Application” build, allowing you to truly create differentiation and innovation for your organization. Rapidly turn new ideas into data driven solutions and transform your current application landscape. Lunavi’s Data Modernization workshop helps you take the first step to modernize your existing data. Apply advanced Azure Data Service with best practices in Azure foundation to surface business insights, design integrated smart apps, and/or build new business analytics dashboards.

TAKE ADVANTAGE OF CLOUD

Go beyond “lift and shift” by leveraging Azure advanced data services, reducing your overall cloud spend and introducing opportunities for automation.

MODERNIZE UNDERLYING INFRASTRUCTURE

If you’re due for a hardware refresh or struggling with aging infrastructure, it’s the perfect time to migrate your apps and data, redesigning them for the latest technology.

MASTER AZURE DATA SERVICES

Deploy and manage intelligent applications with the data architecture and platform integrations required to revolutionize your business analytics; store and analyze vast quantities of information; and leverage AI and machine learning capabilities.

IMPROVE THE USER EXPERIENCE

Your users, whether they are customers or employees, expect self-service, mobile compatibility, and 100% uptime and availability. An data landscape modernization can help you effectively achieve these goals.
