

## Rapid, Flexible and Scalable Business application development services for your needs

Microsoft Power Apps is a mature low-code application development platform for businesses that need a variety of applications to automate manual processes while integrating with other systems. Through Power Apps, companies can extend their existing systems and build custom interfaces and experiences. Leveraging the secure Microsoft platform, Power Apps enables organizations to develop solutions at a fraction of the time and cost compared to other development methods or tools. **GreenData can help you identify, design, build and implement the Power Apps you need across your business.**

### Why Our Customers Use Power Apps

Safe secure and easy integration with over 200 systems.

Digitize manual business workflows, reduce time spent and minimize errors.

Create user-friendly mobile, tablet and desktop app experiences that empower employees.

Collaborate on goals, establish decision gates and work smarter.

Rapidly build low-code apps that enable easy access to functionality and data from any interface.

# How GreenData Can Help You

Our team of business application designers and developers has developed Power Apps for small, mid, and enterprise-sized businesses. Our methodology for creating and delivering high-quality Power Apps involves focusing on human-centered design principles that lead to exceptional user experiences. We have created Power Apps that integrate with HR and ERP systems, re-imagine project management artifact tracking from multiple data sources, and perform organization-wide revenue recognition. If you need to automate a business process, or need help brainstorming how you can extend and improve your current tools with Power Apps, our team can help you!

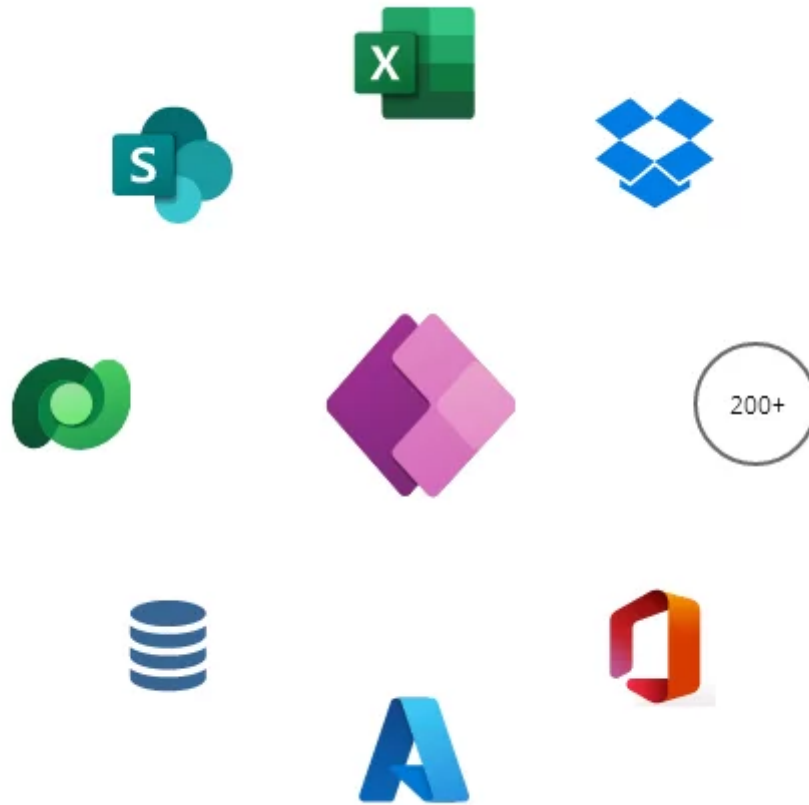

## How You Can Implement Power Apps

### Power Apps in Teams

Do you already use Microsoft Teams in your organization?

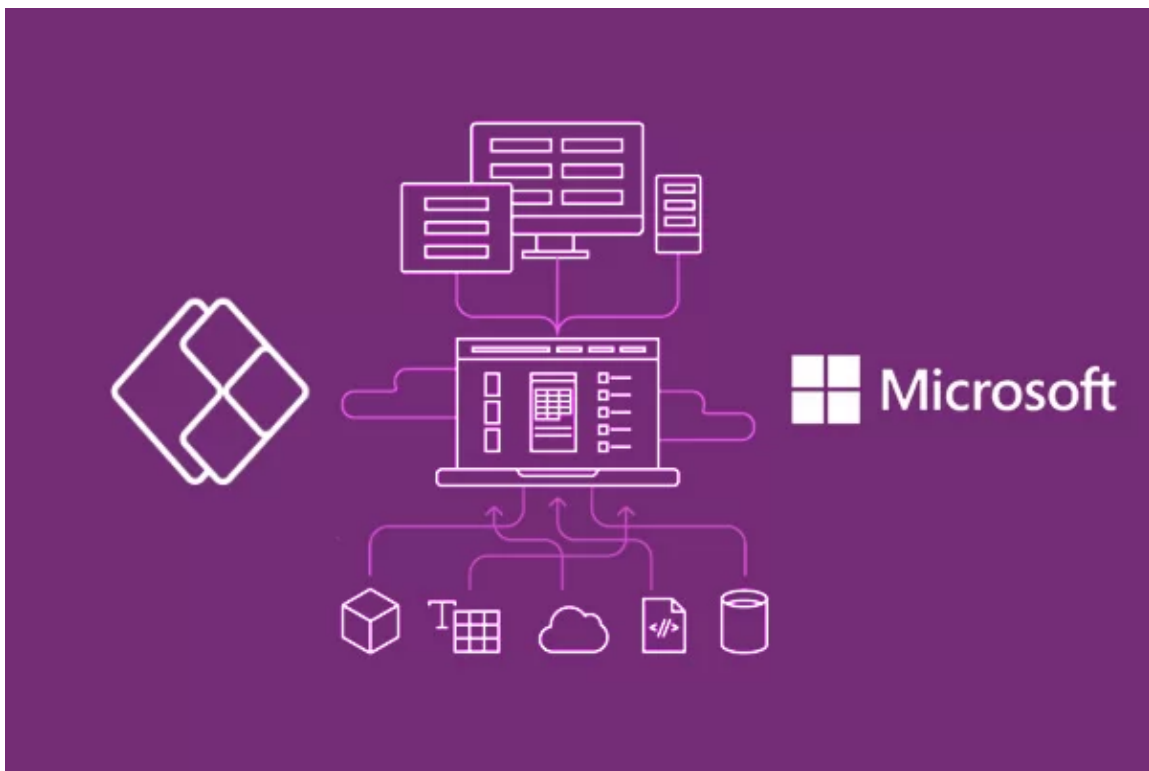

Did you know that there is a way for you to use Power Apps, within Teams at no extra licensing cost? Power Apps for Teams is best used to enhance collaboration by creating every-day tools your workgroups need.

## Power Apps with the Dataverse and external data sources

The value of Power Apps has been enhanced with data connectors for many business applications. Connectors provide the capability to bring data to your apps from hundreds of systems. For systems not yet supported, it is also possible to create custom connectors. The possibilities are endless!

One of the most popular connectors is for the Microsoft Dataverse. The Dataverse enables secure storing and management of data that's used by business applications. It includes a base set of standard tables that cover typical scenarios, but custom tables can also be created to support specific use cases. If your organization uses any Dynamics 365 solution, using Power Apps is an easy way to add the additional capabilities you need.

## Power Apps Portals

Power Apps Portals enable secure, external access to your business stakeholders, whether those are internal or external.

Bring data from the apps you use—including Power BI and Power Automate—together with Microsoft Dataverse and enable users to interact with it anytime, anywhere. Enrich portals with forms, views, lists, charts, and dashboards to offer more value with each interaction.

## Power Apps Examples

### Resource Demand Management

Built with the Enterprise Resource Manager in mind, the GreenData Resource Demand Management app, built on Power Apps enables the enterprise to effectively develop and manage resources across all efforts.

# Timesheet App

Time entry has been a burdensome task typically done through non-intuitive and hard to use interfaces. The GreenData timesheet app solves exactly that. No matter where your projects, tasks and resources reside, this app offers a comprehensive and easy to use interface for all your resources to track, submit and monitor their timesheets.

# We Are Here to Help You Succeed

If you have an existing need for a Power App or have an area in your business that could leverage the platform, let's talk about it!

Our team is working with many enterprises to optimize processes and digitally transform corporate workflows. Whether you need help reimagining existing processes that are currently burdensome for your people or would like to see some examples of what you can do with Power Apps, let us know.

GreenData can also help you develop data architecture plans for your corporate Power Apps, and also provide integrated reporting and automations to your existing and new Power Apps. All of this while leveraging the Microsoft Power Platform and your current systems.

## Our Services

### Full Project Services

If you do not have the knowledge or resources to complete a project, we can provide an implementation team consisting of a project manager, a designer and developers to envision, design and deliver Power Apps projects in your organization.

### Power Apps Training

Get access to our Power Apps experts to help your organization get onboarded with Power Apps and learn key Power Apps concepts including architecture, design, integration and development.

### Ad Hoc Services

Access short-term help from our team of Power Apps experts.

### Envisioning Workshops

We will provide envisioning workshops and business value assessments to help your decision makers decide what aspects of your organization can be digitized using Power Apps.

## InfoPath to Power Apps

Let us convert your InfoPath solutions to Power Apps. In addition, we will provide consulting on best practices for the transition of your teams.

## Virtual Team Member

Meet with a consultant and make them part of your team for advisory services and training, debugging support or other development needs.
