

## Modern Workspace CloudBlox

Increase business agility and efficiency. Give users secure, flexible access to corporate applications. Free your IT team to work on more strategic business initiatives, such as data governance and compliance.

Applications are the lifeblood of every business but delivering them via traditional desktops involves time-consuming management and complicated deployment: multiple operating systems, different manufacturers, diverse applications, and constant patching. And with almost 40% of workers now telecommuting\* and the proliferation of BYO devices, uninterrupted application accessibility is paramount in global organizations.

Why not give your users seamless access to crucial corporate applications from PCs, laptops, phones, and tablets AND reap the benefits of scalability, security, and easy management?

(\*Gallup)

### GreenPages CloudBlox

Vetted, proven, and ready to perform. All the goodness. None of the risk.

**Technology:** The Cloud Technologies You Need.

**Design:** Vetted, Proven Reference Architectures.

**Deployment:** Expert Migration Strategies & Tech Team.

**Management:** Fully Supported & Maintained by GreenPages.

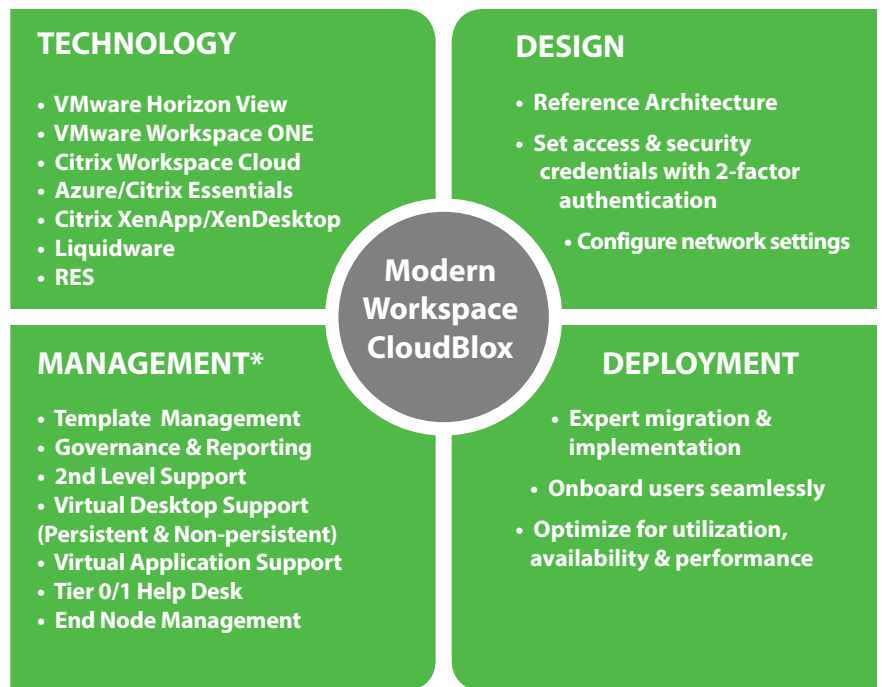

### Choose Your Configuration

Only need design services? Just want the cloud technology? Looking for management only? No problem. Our CloudLogic Framework makes it easy to configure each CloudBlox to match your business needs.

### OEM Funding Opportunities

Depending on the platform you choose, we can explore OEM funding options to help offset costs.

### What's In the Modern Workspace CloudBlox?

\*Extended Support Options: Two models to choose from:

- Tier 0/1 Help Desk Services: GreenPages' trained and experienced Help Desk experts will provide 5x12 live body escalation support and issue tracking for any end user application availability issue. We will troubleshoot initial problems, then escalate to your own help desk if necessary.
- End Node PC Management: This is an extra layer of security protection for your desktops. GreenPages will perform OS and application patching, updates, and antivirus services to ensure proper configuration and strong protection against malware and viruses.

## BUSINESS BENEFITS

### Scale up or down as business needs dictate.

Experiencing accelerated growth? Need to deploy extra desktops at peak or seasonable times? New M&A activity or branch office openings? GreenPages' Modern Workspace CloudBlox gives your business the extreme agility necessary to compete in the modern cloud era.

### Transform your IT organization into an innovation center.

Wouldn't you rather have your IT professionals delivering high value initiatives for your organization instead of remediating and maintaining aging desktop technology? Imagine the services you could provide to your business if you were suddenly free to innovate instead of mediate.

### Maximize IT investments with more predictable service costs.

Is paying steep hardware costs a smart use of your capital? Why not forego upfront capital desktop and peripheral expenses and pay an easy monthly subscription per desktop? It doesn't make smart financial sense to over-purchase "just in case."

### Fast and easy deployment for new hires.

Give new employees personalized laptops or PCs (persistent and non-persistent) with all the applications they need in just 10 seconds and 5 clicks. Easily set user permissions and deploy and decommission quickly for contractors and temporary workers.

### Minimize security risk around data loss.

GreenPages provides your organization with a high level of security by handling all antivirus management and patching behind the scenes. This ensures your data is always safe and your applications and operating systems are always up to date.

## STILL NOT CONVINCED? WHY NOT CONDUCT A WORKSHOP?

This is a great first step toward experiencing how GreenPages can add significant value to your business. GreenPages' Cloud Workshop not only evaluates your readiness for cloud, but provides you with the best practices and ROI necessary to enable a successful cloud migration. Depending on the platform you choose, an OEM-funded POC could be included to migrate a workload and establish a cloud footprint.

GreenPages is SOC 2 accredited to provide clients with the strictest security and confidentiality, operational rigor, and systems excellence.
