

Green Project's Carbon Accounting & Decarbonization Platform

Turn Ambitious Scope 3 Goals into Actionable Supply Chain Strategies

Reducing your Scope 3 footprint can be overwhelming. Collecting accurate data from your suppliers can be particularly challenging due to inconsistent reporting, limited visibility, and the complexities of global operations. Our holistic carbon accounting and decarbonization platform simplifies this process by making it easier to calculate, track, and reduce emissions across your entire supply chain.

How Our Platform Powers Your Success

Enhance Data Integrity

Improve your Scope 3 emissions calculations by using data directly from your suppliers instead of rough estimates. This approach ensures that your decarbonization strategy is based on reliable and precise information, making your reduction and reporting efforts more effective.

Stay Ahead of Regulatory Requirements

Get the guidance and tools you need to adhere to global standards and frameworks. By staying informed and prepared, you can effectively avoid penalties and navigate regulatory changes with confidence.

Streamline Renewable Energy Procurement

Our centralized Click to Decarbonize dashboard gives you greater insight into your suppliers' renewable energy procurement. With one-click access to Energy Attribute Certificates (EACs), your suppliers can easily reduce their Scope 1 and 2 emissions, which in turn lowers your Scope 3 emissions.

Elevate Supply Chain Sustainability

We'll help you provide expert ESG support to suppliers, enhancing their sustainability maturity and ensuring they hit their targets effectively.

Our Proven Approach to Supply Chain Decarbonization

With our comprehensive platform, we deliver a clear pathway for supply chain decarbonization by integrating environmental strategy guidance with market-based solutions and carbon accounting. First, we'll conduct a detailed assessment of each supplier's sustainability maturity, followed by tailored education and data mobilization to ensure they're well-prepared to meet your climate action goals. Throughout this process, we'll provide your suppliers with personalized, white-glove support, equipping them with the necessary tools and knowledge to drive successful outcomes.

Built to Scale, Designed for Impact

Our platform's robust features ensure that your supply chain can scale its decarbonization efforts effectively:

Streamlined Utility Data Collection

Effortlessly track and manage resource consumption with automatic, real-time access to usage data from over 12,000 global utility providers.

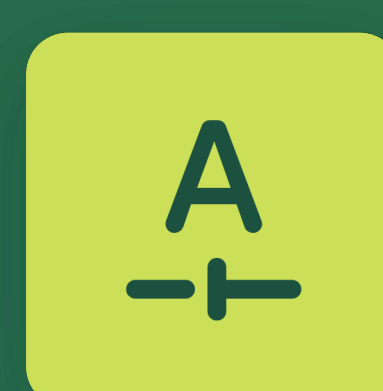

Expert Advisory Support

Access additional guidance for CDP reporting, SBTi alignment, and other critical sustainability frameworks, helping you and your suppliers navigate the complexities of decarbonization.

Integrated ACT Products

Utilize ACT's comprehensive suite of products within the platform, including automated retirement statements that simplify the management of environmental attributes.

Customizable White-Label Experience

Our platform can be white-labeled to create a tailored experience for your suppliers, facilitating seamless alignment with your brand.

Comprehensive Coverage

Achieve full Scope 1-3 coverage, ensuring that all material emissions are accounted for.
