

Microsoft Purview & Generative AI Synergy: Data Governance for the Future

Usage of generative AI increases day by day in enterprise environments, in some cases without control. In addition to the productivity benefits, it also opens the door for more advanced data exfiltration incidents.

Unlock the combined power of Microsoft Purview and Generative AI solutions like Microsoft Copilot to elevate your data governance and security. This service guides your organization through Purview's advanced data classification, sensitivity labeling, and compliance capabilities. Together, Purview and Copilot automate data discovery, streamline compliance, and empower teams to utilize classified data confidently and securely, fostering a compliant, AI-powered digital environment.

Deliverables:

- Purview introductory workshop (2h)
 - Assessment of the current Purview configuration
 - Going through the prerequisites of a full Purview setup
- Setup of sensitivity labels, DLP policies, and Generative AI insights (8h)
 - Creating sensitivity labels, or fine-tuning the existing labels
 - Creating basic DLP policies in audit / simulation mode (for example sensitive file copied to USB drive)
 - Setting up required policies to collect data from Copilot
- Custom reporting and insights (2h)
 - Introduction on the use of Activity Explorer

Outcome: A secure, AI focused data governance foundation, optimizing compliance and knowledge management across your organization.
