

Azure cost and risk governance, with safer action

CloudScrub brings official Azure cost data, resource waste signals, security findings, AI-assisted investigation, and auditable remediation into one workspace.

SEE THE COST. PRIORITIZE THE RISK. CONFIRM THE ACTION.

One operational view for Azure governance

Understand Azure cost

Review official cost and usage data, trends, major cost sources, and estimated savings in context.

Find waste and risk

Identify supported idle-resource, configuration, and security findings and prioritize them by impact.

Investigate with AI

Ask natural-language questions and use a tool-assisted workspace to explore subscriptions, cost, and findings.

Act with control

Preview supported remediation, require explicit confirmation, and retain an audit trail of governance actions.

How CloudScrub works

A governed workflow from visibility to action

- 1

Connect
Sign in with Microsoft Entra ID and select the Azure subscriptions to manage.
- 2

Assess
Run cost, waste, and supported risk assessments using the permissions granted by the customer.
- 3

Prioritize
Review findings, estimated savings, severity, evidence, and recommended next steps.
- 4

Confirm
Preview supported changes and require an authorized user to confirm before execution.
- 5

Audit
Record the actor, target, approved intent, timestamp, and outcome for governance review.

Security and data handling by design

• Microsoft Entra ID authentication and Azure role-based access control.	• No persistent storage of user Azure OAuth or refresh tokens.
• Tenant-partitioned product data and Marketplace entitlements.	• Managed identities and Azure Key Vault protect service-to-service access and secrets.
• Azure Front Door Premium and managed WAF protect the public application edge.	• Write operations require supported intent, preview, confirmation, and successful audit persistence.

CloudScrub does not claim a customer is compliant and does not replace Microsoft Azure invoices, Azure Policy, Microsoft Defender for Cloud, or professional security review. Cost and risk signals depend on source-data availability and granted permissions.

Plans for growing Azure estates

Flat-rate plans align governance capacity to the number of managed Azure subscriptions.

PLAN	MANAGED AZURE SUBSCRIPTIONS	DATA RETENTION	SELECT CAPABILITIES
Pro	Up to 3	90 days	Cost and risk workspace, supported actions, exports
Team	Up to 10	180 days	Higher usage limits and BYO Azure OpenAI
Scale	Up to 50	365 days	Expanded usage limits and concurrency

Plan availability, pricing, trial eligibility, and final entitlements are governed by the current Microsoft Marketplace listing and purchase terms.

Get started

- Purchase CloudScrub or start an eligible trial through Microsoft Marketplace.
- Select Configure account and sign in with a Microsoft Entra account.
- Confirm and activate the Marketplace subscription.
- Add Azure subscriptions and grant the required read permissions.
- Run the initial assessment and review prioritized findings.
