Enterprise-grade software development

What we do

Excellent software engineering is at the forefront of digital business, and we go beyond features and backlogs to emphasise a broader look at great user experiences and outcomes.

We embrace lean and agile principles that are iterative, interactive, and collaborative – fostering a 'start-up' mindset that encourages innovation and creativity. Our engineers deliver enterprise-grade software solutions, leveraging agile approaches, proven customer collaboration models, engineering disciplines, DevOps culture, and our own accelerators to solve your toughest challenges.

Benefits

Creating high quality bespoke solutions that deliver genuine value and enhanced business results

Achieve the agility required to improve time to market, reduce costs, build resiliency, and enhance customer experiences, while positioning for growth through innovation.

Integrating a wide variety of systems, plug ins, extensions, and tools within your existing solutions and business systems will provide a more streamlined approach to your workflows, maximising efficiency and boosting your ROI.

Taking a tailored approach to integrating many services rather than a single package software will support you through the complete software cycle, from business vision requirements capture to design and development of an MVP, scaling, maintenance, and enhancement.

Our process

We help you through the complete software lifecycle, from business vision requirements capture, design and development of an MVP, and scaling, through to maintenance and enhancement.

We use our own distinctive engagement and delivery model: we are UK-headquartered, with highly experienced, motivated, and qualified teams

of software developers based offshore in Vietnam and Costa Rica.

Our way of working is versatile, adaptive, and highly collaborative and usually includes co-located teams for at least some of the project. Backed up by a team of local experts who liaise directly with clients, we provide advisory support, and direct the offshore development work as required.

Business vision requirements capture → **Design and development** → **Maintenance and enhancement**

Why NashTech

We are an 'enterprise-grade' software solutions partner with a strong software engineering capability, DevOps culture, and technical architecture know-how.

We believe in partnership and collaboration and we are client-focused, accessible, and responsive. For over 20 years, we've been designing, testing, and implementing bespoke software, integrating with leading solution vendors for businesses across all sectors.

Our suite of methodologies and accelerators can be customised for each project – speeding up the process and creating high-quality, cost-effective outcomes. Our engagement models span fixed or flexible budgets and fixed or flexible scopes, as

well as an adaptive development service for smaller budgets with small teams and low commitment. We are big enough to deliver, and small enough to care, offering you quality results and a collaborative working relationship.
