HCLTech | Supercharging Progress™

Extensible platform automation and configuration engine **(ePACE)**

Empower the life cycle management of multi-cloud PaaS

As enterprises are looking to scale cloud transformation initiatives, multi-cloud is becoming the new normal. After all, the technology offers multiple benefits: attractive pricing, increased innovation and risk mitigation. You're also less dependent on a single hyperscaler with a multi-cloud service.

Challenges in multi-cloud journey

- Inflationary total cost of ownership due to increased complexity
- Creating an effective security architecture and unified policies across clouds
- Disparate tools, consoles and technologies
- Finding the right skill requirements and resources with expertise in multiple cloud technologies
- Lack of visibility and monitoring across clouds

HCLTech's ePACE is a life cycle management automation accelerator for multi-hybrid cloud use cases. It helps you to overcome the above challenges, so you can extract maximum value from the cloud.

The accelerator simplifies and standardizes the provisioning and management of PaaS services. This includes enterprise Kubernetes platforms across multiple clouds.

ePACE is based on the principles of Infrastructure as Code (IaC). And supports both cloud-native and cloud-agnostic automation frameworks.

The accelerator provisions cloud services and accomplishes integration between them with the required configuration policies and RBAC. This enables you to deliver a secure, reliable and ready-to-use enterprise. platform.

Benefits

Unmatched velocity and efficiency
Up to 80 percent faster service completion with automated provisioning of complex platforms

Consistency
The Infrastructure as Code (IaC) approach ensures that all environments are provisioned in a consistent manner

Secure
Zero-trust security and RBAC for all provisioned resources

Extensible
Import and integrate new cloud PaaS services and cloud-native ecosystem tools into the OneClick automation framework

No lock-ins
Based on cloud-native and open-source technologies

Recent engagements

ePACE simplified the enterprise container platform life cycle management for a global hi-tech company

Enabled operations automation for a global biopharma company through ePACE Infrastructure as Code pipelines
