

Sunoh.ai, a Revolutionary AI-Powered Ambient Listening Technology for Clinical Documentation

Sunoh is designed to translate natural language conversations between healthcare providers and patients into clinical documentation. Sunoh offers a unique and immersive experience for both doctors and patients, making the documentation of clinical notes faster and more efficient than ever before. Use it with your EHR to accelerate your documentation.

Listens to the conversation

Sunoh listens to patient-provider conversations to help document clinical information accurately and efficiently.

Generates a dialogue flow

Sunoh uses AI and voice recognition technology to create a transcript of the dialogue flow between providers and patients.

Creates clinical documentation

Sunoh categorizes the summarized content into various Progress Note sections and allows for reviewing and importing relevant data for clinical documentation.

Assists with order entry

Sunoh's summary captures lab, imaging, procedure, and medication orders, as well as follow-up visit details.

Summarizes content for review

Sunoh allows healthcare providers to review summarized content for accuracy and completeness, modify it if necessary, and merge pre-configured defaults with a single click.

Leverage Sunoh Assistant

Providers can set and merge exam defaults, set a patient's preferred pronouns, handle visits in multiple languages, and use Progress Notes or procedure notes for clinical documentation.
