HEAL is a preventive healing solution that predicts and prevents rather than just fixing what's broken. Using a patented technique called "workload-behavior correlation," HEAL is a platform that uses AI algorithms and machine learning models to help enterprises run without a hitch.

HEAL analyzes all the aspects that go into the smooth running of an IT system (the cumulative volume, composition, and payload), and reacts every time an abnormal behavior occurs, triggering either a healing action or a scaling action depending on the root cause of the problem.

Terms and Conditions

Your terms and conditions go here...

HEAL is a preventive healing solution that predicts and prevents rather than just fixing what's broken. Using a patented technique called "workload-behavior correlation," HEAL is a platform that uses AI algorithms and machine learning models to help enterprises run without a hitch.

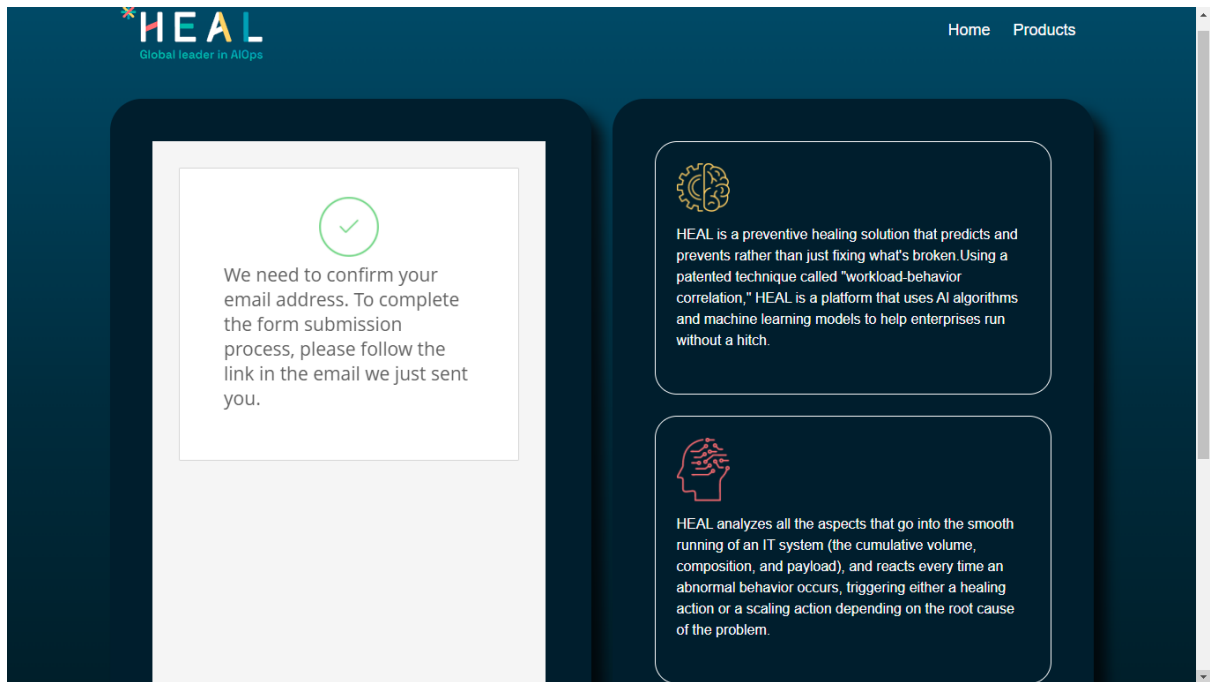

HEAL analyzes all the aspects that go into the smooth running of an IT system (the cumulative volume, composition, and payload), and reacts every time an abnormal behavior occurs, triggering either a healing action or a scaling action depending on the root cause of the problem.

With the help of the Machine Learning Engine (MLE), HEAL can establish a relationship between the workload...
