

Heyhack

Heyhack Scan

The #1 Dynamic Application Security Testing Platform

Run automated penetration tests to catch and fix security vulnerabilities in your web applications in development.

Strengthen your web app security and stay compliant with Heyhack's all-in-one penetration testing solution.

Zero Configuration Required

Set up a web application to test in Heyhack with just a couple of clicks. Simply provide the URL address of your web app along with the credentials of one or more test users. Start testing in less than 5 minutes.

Integrates with Your SDLC

Seamlessly connect Heyhack with your software development life cycle. Heyhack offers native integrations with GitHub, Jira, Azure DevOps, and many more. Trigger pentests from your CI/CD pipeline.

Supports Multiple Test Users

As the only DAST solution in the market, Heyhack supports testing applications with multiple test users. This lets Heyhack test for vulnerabilities related to Broken Access Control—the #1 issue in OWASP's Top 10.

100% Transparency

Heyhack documents every single step of the penetration test with both screenshots and test cases. This lets you examine all pages and page elements that have been crawled and tested by Heyhack.

Comprehensive Coverage

Heyhack comprehensively covers all parts of your application. By simulating real web browser instances in the cloud, Heyhack interacts with your web app like a real user would, letting us uncover all functionalities.

Documentation for SOC 2 & ISO 27001

Generate PDF reports that summarize the results of penetration tests conducted by Heyhack. Tailor the contents of your PDF reports to your recipients—either auditors or customers who require documentation.
