# Workforce Authentication Challenges: Digital & Physical Access

## Passwords & MFA Are Broken

#1

Vector of unauthorized access is **phished credentials**

84%

of organizations had an access-based breach in 2023

59%

workers use the same or similar passwords on multiple accounts

## Single Sign-On (SSO)

SPoF

SSO creates a Single Point of Failure

10+ Okta Breaches

Disclosed since 2022

## Unlocked Devices at Workplace

25%

of workers regularly leave their computers unlocked and unattended

>80%

process critical information, such as customer data, production details, and financial data, etc.

9/10

of organizations do not implement extra security measures to facilitate remote working for staff

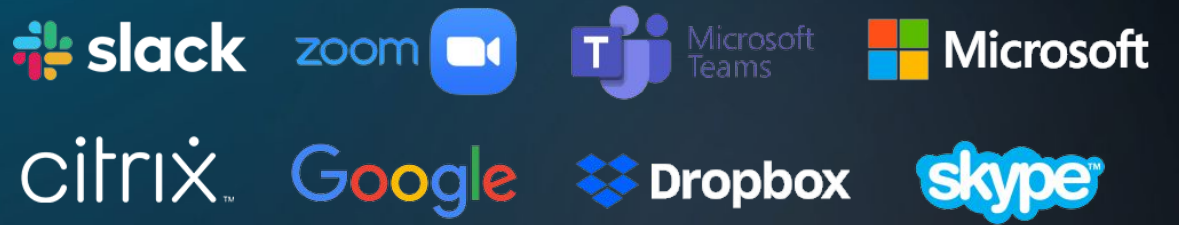

Workers

# Hideez Key

Bridging the gap between logical and physical access

**FIDO U2F**  
Universal 2nd Factor

**FIDO2**  
Passwordless Authentication

## Logical access

FIDO Security Key

Password Vault

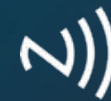

OTP Generator

## Physical access

Proximity-Based PC Login

Unattended PC Logout

RFID Key Card

NFC

Bluetooth

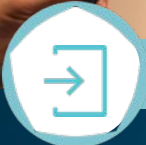

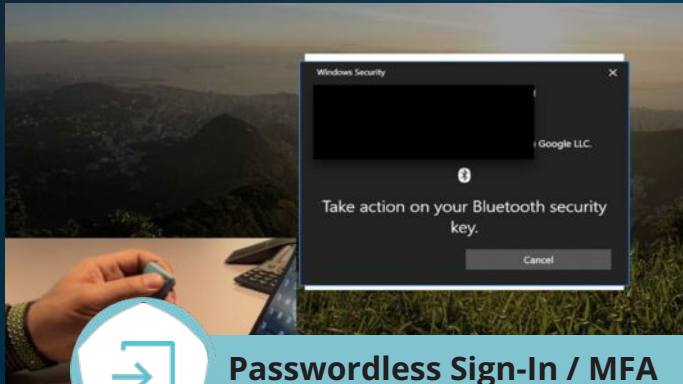

RFID

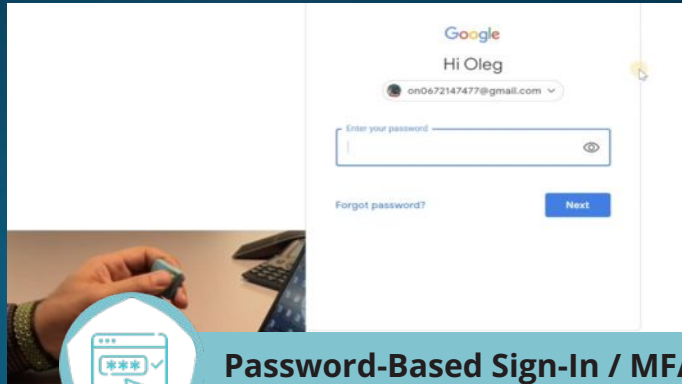

USB

# Hideez Key: Common Use Cases

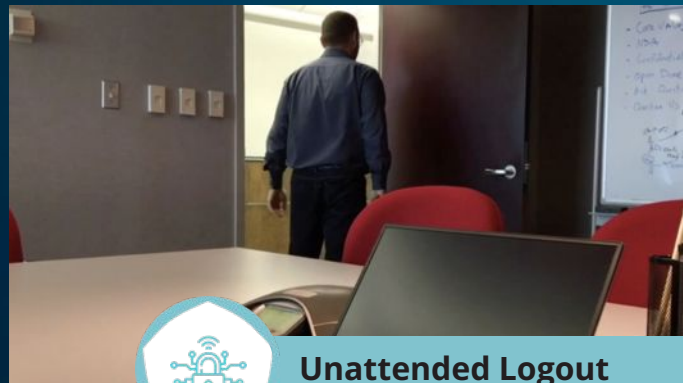

Passwordless Sign-In / MFA

Password-Based Sign-In / MFA

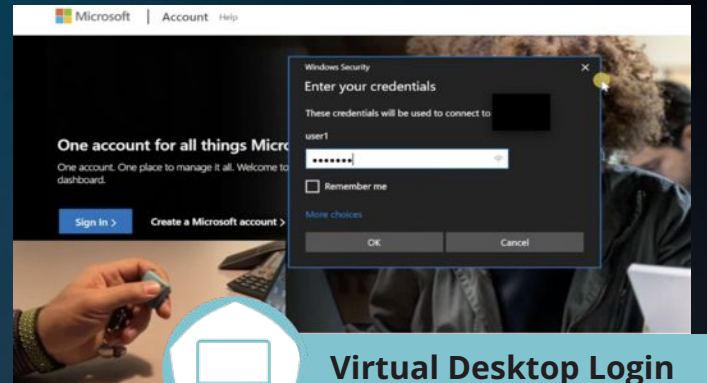

Proximity-Based PC Login

Unattended Logout

Physical Access

Virtual Desktop Login

# Hideez Authenticator

Android & iOS

## Login to web services

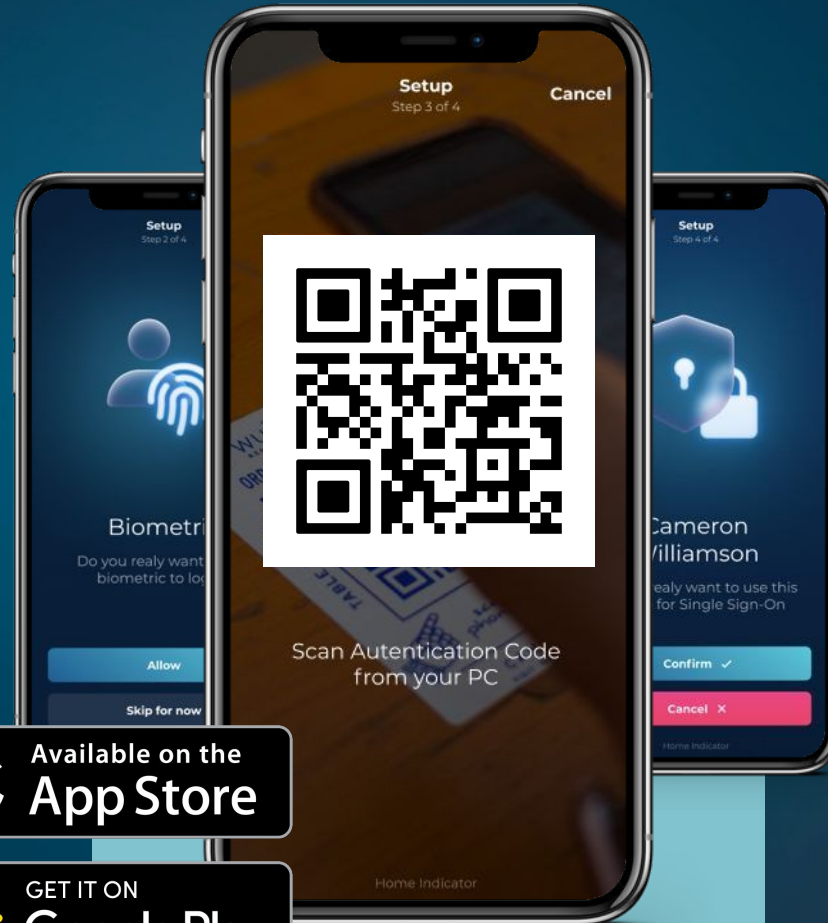

### Passwordless authentication

Use the Hideez Authenticator to sign in to web services without passwords. The app generates unique one-time QR codes and is protected by biometrics

## 6 4 \_ One-Time Passwords

The app allow to generate one-time passwords (TOTP) for traditional two-factor authentication

## PC Logon

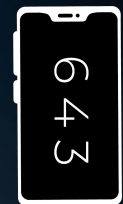

### Online

Scan a one-time QR Code on a Windows workstation to unlock the computer

### Offline

In the absence of the Internet connection, the computer can be unlocked by entering a one-time code from the app
