A line of code for life,

enhanced by the soul-enriching essence of technology

omnimedica

by htss.

At omnimedica, **we place our trust in the soul-enriching essence of technology**. We understand that technology is not merely a line of code; it's a tool that enhances the human experience, especially in industries that value life. Our mission is to put the patient, doctor, and human at the center of our technology solutions, with a focus on prevention, accessibility to quality healthcare, and the optimization of the entire healthcare ecosystem

Suitable for:

Clinics

Online doctors

Pathological anatomy laboratories, molecular biology, prosection, etc.

100% Digital Ecosystem

omnimedica is a modern and advanced platform that transforms how clinics and medical services are managed. It eliminates the need for physical documents, providing a barrier-free solution available anytime and anywhere through the online environment.

We offer the possibility **to customize the platform** to match your clinic's specific requirements and processes, including work screens and necessary forms. This means you can adapt the platform to your working style.

Quality Service

Modules

Through advanced digital technology, we provide solutions and tools that support doctors and medical staff in delivering superior and more efficient healthcare.

Clinic

Our care management functionality ensures that patients receive tailored attention It empowers healthcare teams to create personalized care plans, improving the quality of care while reducing the burden on medical professionals.

HistoPath Laboratory

Our lab functionality goes beyond traditional procedures. It enables healthcare providers to streamline diagnostic processes, reduce waiting times, and enhance the accuracy of results.

Integrations with partners and third parties

Patient Portal

Doctors have access to consultation histories, chat discussions & patient submitted files. With the patient portal platform, doctors don't waste time searching for patient information because they have everything organized in one place.

Clinic

1 Documents and standard forms

With omnimedica you say goodbye to the wasted time spent while entering data manually, thanks to the app predefined templates and intelligent capabilities to fill in the fields which are most relevant for the medical doctor.

2 Stock management

With omnimedica, stock management of drugs and medical supplies becomes easy. For pharmacies, the solution allows you to track activity directly from the platform, to automate closed-loop workflows, and issue an extensive set of financial-accounting and business management reports.

3 Continuous development

New functionalities are constantly being added to the platform in order to increase the quality of medical care, optimise the use of resources in the clinic and streamline the work processes.

HistoPath - Medical module developed for and with pathologists

Benefits

Automated processes from A to Z

The HistoPath module covers all IT processes related to pathology laboratory workflows, from the generation of a request to the release of the result. Screens are structured by areas of interest and the module automatically records all operations of a request in accordance with RENAR requirements.

Easy and intuitive operations

Adding and registering incoming samples is very easy by simply entering a minimum set of mandatory data. HistoPath also provides extensive sets of relevant options such as diagnostic, anatomical areas classifications and more. Each sample can also be cross-referenced while clinicians can assign tasks to assistants, which can be viewed on a specific screen. This is also where specialists keep track of the work progress.

Once validated, samples will activate the "Histopathology Report" area where medical information and results can be uploaded.
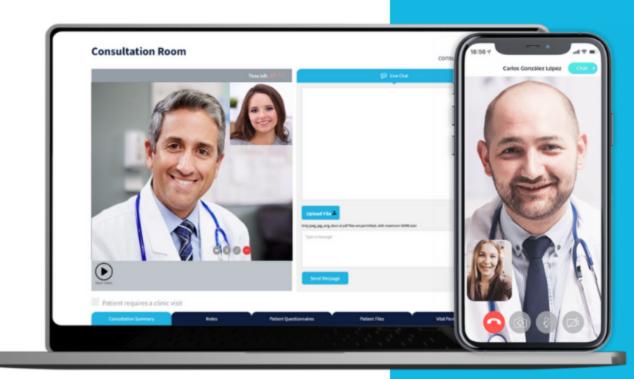

Patient portal: Always be there for your patients' health!

Doctors have access to consultation histories, chat discussions, patient submitted files, and recommendations or prescribed treatment.

With the patient portal platform, doctors don't waste time searching for patient information because they have everything organized in one place, easily accessible from any device, for a close monitoring of patient progress.

Your clinic is more efficient thanks to the real feedback and updates you receive from your patients, directly in the platform, at the end of the video-audio or chat session.
