

Getting started

This article describes the first steps on using trueChart for Excel. It is assumed, trueChart for Excel is deployed in you workspace.

To add a trueChart visualization to your Excel worksheet, go to Excel's **Insert** tab, choose **Add-ins** and select **trueChart**. This will insert a new trueChart object into your worksheet.

Adding data contexts

trueChart automatically creates a new data context for the currently selected data or the data the cursor resides on. If you want to create additional data contexts, click on **Settings**.

Excel Data

- Dimensions (0)
- Measures (0) +
- [x] Variables

Excel Data

- [Grid icon]
- [Zoom icon]
- [Target icon]
- [Trash icon]

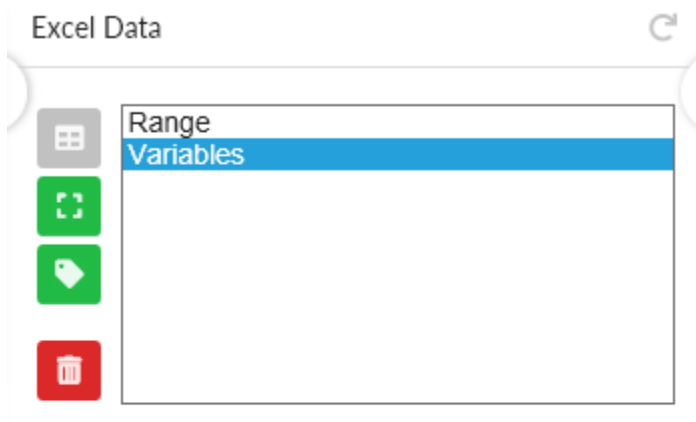

Here you have the option to add a data context from a table, a range, or any named item on your sheet (which includes custom-named ranges and tables as well).

Using variables

In order to use Excel data as variables in trueChart, you need to create a variable table, add it as a data source to trueChart and click on **Use as variables**:

Key	Value
alfa	1
bravo	2
charlie	3
delta	4
echo	5
foxtrot	6
golf	7

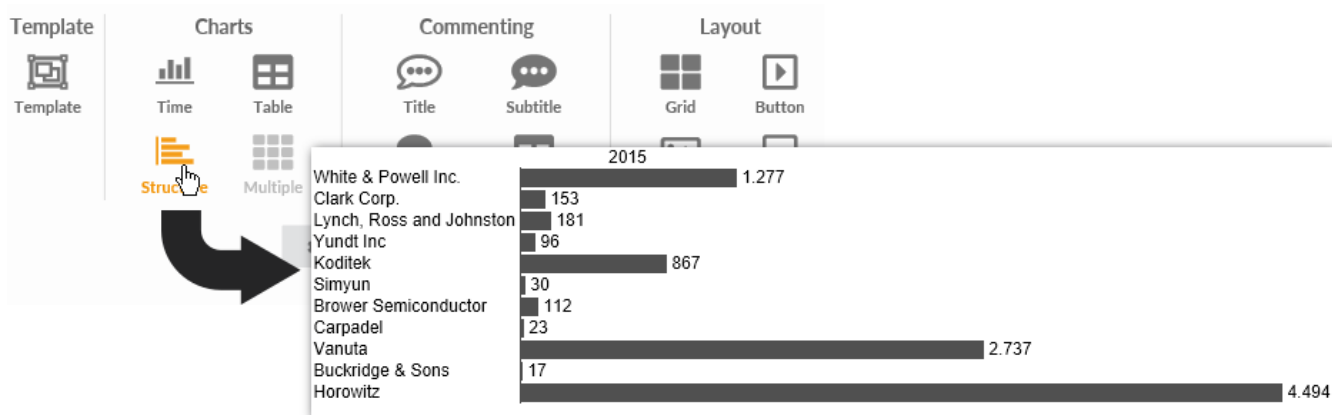

A Key (Dimension)

V Value (Measure)

Use as variables

Creating a chart

After you've added all the necessary data contexts, trueChart is ready to create charts:
