

Power Platform Enterprise Maturity

3 - Week Assessment

CONTACT US today to get started!

Assessment Overview

Hitachi Solutions is helping Microsoft Power Platform makers and pro code developers bring the **right** tool to the job to deliver better business outcomes. With focus on your company's high-value applications and processes, we help you leverage low-code and pro-code technologies to accelerate your modernization efforts. From consolidation of redundant applications, to replacing outdated systems, to modernizing applications and processes for increased scale and adaptability, we help you to plan a structured and comprehensive approach.

Our **3-week engagement** will help you determine your current state adoption of the Power Platform and the specific steps you should take to reach improved maturity with the tools. With **clear understanding of business impact, ROI, and cost benefit insights**, along with guidance on how to structure your organization's **maturity strategy**, your team will be able to knowledgeably plan your modernization prioritization and planning strategy.

Why Take Action?

Hitachi Solutions team of low-code and pro-code experts will help you identify when to use what technology to create more efficient, modern applications to meet your business goals.

Whether your team:

- Has makers/developers or hasn't started to adopt Power Platform
- Are on a deadline to replace legacy technology
- Has a large quantity of applications that require modernization
- Is struggling with issues related to security, compliance, or data management
- Is considering adopting and integrating emerging technologies like AI, Microsoft Copilot, or low-code and pro-code platforms

With so many attributes that are unique to your business, our maturity assessment will support you in understanding your current state of Power Platform adoption and provide the steps you should take to reach maturity to deliver successfully against your desired outcomes.

Outcomes

With this assessment, we'll support you in prioritizing processes and applications to be modernized, identifying redundant applications for consolidation, and develop a license strategy to optimize TCO. The outcomes and benefits of this assessment include:

- Streamlined operations through prioritization of processes and applications
- Cost saving through consolidation of redundant applications and development of a well-designed strategy addressing licensing, support, and maintenance
- Enhanced security and compliance
- Identify how to incorporate generative AI (Microsoft Copilot) to maximize productivity and help future-proof your organization

Modernize your legacy applications and processes to save costs, improve business agility, and increase ROI – AND – ensure your systems are up-to-date, secure, and scalable.
