Hitachi Solutions

Secure Your Productivity

3-Day Workshop

CONTACT US today to get started!

Overview

Organizations are challenged with integrating their remote workforce, and to how best increase collaboration, productivity, and security. During our 3-day workshop and product demo sessions, **learn how to leverage new and emerging Microsoft features and technologies to enhance productivity with AI-powered cloud solutions** while ensuring a secure workforce. Understand the Microsoft features and capabilities you currently have today and look for ways to consolidate or upgrade your tools and technologies.

This engagement will introduce the modern work capabilities to safely run your business from anywhere via a secure solution that simplifies endpoint management, establishes a Zero-Trust foundation, and helps understand how AI capabilities with Copilot can benefit your organization.

Why Take Action?

With this Workshop, build a solid foundation built on zero trust principles and super charge your organization's productivity with Copilot. Our experienced team will help you address your organizations:

- **Copilot Readiness:** Not knowing or understanding the technical requirements and organizational requirements to truly be Copilot (AI) ready.

- **Security Risks:** Security, aligned with Zero-Trust security principles are covered in the workshop, can reduce the risk of data breaches by leveraging the power of Microsoft 365.

- **Collaboration:** Microsoft 365 brings together tools that facilitate seamless collaboration, improving overall productivity. With the addition of Copilot, users can experience enhanced productivity and reduce repetitive and manual tasks.

- **Endpoint Device Management Challenges:** Modernize and secure your digital worker's devices while enabling workforce flexibility and productivity.

- **Efficiency Issues:** Microsoft 365 Copilot can help eliminate redundant or manual tasks and improve the efficiency of multi-tasking and context switching.

Outcomes

Upon completion of the Workshop and Product Demo, customers can anticipate the following outcomes:

- Better understanding of the M365 E3/E5 security features and how it may benefit the organization to safely secure their workforce with a Zero-Trust foundation.
- Ways to consolidate tools and potentially reduce costs for security and device management.
- Accelerate understanding of securing and simplifying the management of endpoint devices for remote workforce with M365 Intune.
- Gain understanding of how leveraging M365 Copilot can improve productivity.
- Products and licensing required with a proposal for implementation of a POC, Pilot or production deployment

At the end of the workshop, we'll provide you with:

- Secure Productivity Workshop and product demo with summary documentation on securing the workforce with a Zero-Trust foundation with M365 and elevating productivity with AI-powered M365 Copilot.
- A summary of 3rd party vendors that could be consolidated under the M365 E3 or E5 license SKU.
- Recommendations for M365 E3/E5 features for security, identity, and endpoint management solutions to help build a strategy towards a Zero Trust model.
- Products and licensing required with a proposal for implementation of a POC, Pilot or production deployment.
