

Unlock the Benefits of Microsoft Dynamics 365 Finance

FinanceCore 365: 16-Week Implementation

Dynamics 365 Quick Start: FinanceCore 365 (Dynamics 365 Finance)

The Offer

Businesses struggle with poor visibility on financial period closing progress, unreliable reporting, complex sub-ledger reconciliation, manual and error-prone vendor invoicing, delayed vendor payments and time-consuming bank reconciliation. Now more than ever, teams need an advance, scalable finance application that provides the capabilities essential for a growing business.

Hitachi Solutions' streamlined implementation of **Dynamics 365 Finance** can help your team experience transformative benefits in just 16 weeks.

Key Benefits:

- Clear visibility and controls over financial processes with workspaces and workflows
- Faster reconciliations and month end closing
- Automated vendor invoice management and payment
- Automated bank reconciliations
- Streamlined customer invoicing

16 Weeks

Why Hitachi Solutions?

Hitachi Solutions is a global systems integrator with leading capabilities in Microsoft solutions and technologies. Our professionals combine advisory services, industry and technology expertise, and implementation excellence that encompass our customers' people, processes, business applications, and technologies to support and accelerate their data and business system modernization initiatives.

Why Dynamics 365 Finance?

Dynamics 365 Finance is an enterprise business application for managing core and finance operations. It automates day-to-day routine tasks like accounts payable and receivable, expense management, and reconciliation. With configurable workflows and tight compliance, Dynamic 365 Finance greatly reduces manual efforts, minimizes errors, and improves overall efficiency. It offers real-time insights into financial performance with embedded BI and financial reporting. As a scalable solution, it caters to all your growing business needs.

Our Approach

Week 1 to 4: Inception and Elaboration

- **Analysis:** Use our curated set of business scenario documents as a foundation and work with our consultants to convert these into your business specific scenarios.
- **CRP:** See how the out-of-box solution works to identify potential gaps.
- **Blueprint:** Develop a detailed project plan and timeline to deliver the project.

Week 5 to 8: Construction

- **Customization:** In the allotted budget of 120 dev hours, we develop customer invoices, remittance advices, or any other reports.
- **Configuration:** Our team works with you to configure the gold environment.
- **Data migration:** We import core Dynamics 365 Finance related masters and opening balances.

Week 9 to 14: Transition

- **Key user training:** We train your key users to independently use D365 Finance, provide session and task recordings.
- **User acceptance testing:** Your team test the system with their business scenarios.
- **Cutover planning:** We prepare cutover planning with you, do production deployment, and final master data migration.

Week 15 to 16: Operation

- **Go live:** We upload opening balances, 2 years of month-to-month ledger balances and you go live.
- **Hypercare:** We provide 2 weeks of Hypercare with our managed services team to guide you and close the project.

The Outcomes

- **Comprehensive Financial Management:** Configurable workflows and approval frameworks align your financial processes with industry's best standards. Role-specific workspaces help your team focus on tasks relevant to their job requirements, ensuring they are on top of their deliverables.
- **Easy ledger sub-ledger reconciliation:** Your financial reconciliation has become significantly easier with the out-of-box reconciliation reports and controls. Period closing is also faster and more transparent with clear tracking of open tasks and due date.
- **Automated AP processes:** Vendor invoice processing has become fast and error-free with the invoice capture and payment process automation, saving numerous man-hours for you.
- **Automated bank reconciliation:** Your bank reconciliation process has become faster with the Banks module's strong matching rules, automatically reconciling bank statements with bank books.
- **Advanced Analytics and Reporting:** Embedded BI dashboards and built-in analytics reports provide real-time insights from your data.
- **Security and Compliance:** Your data is more secure with built-in security roles and compliance tools to help you meet regulatory requirements and protect sensitive financial data.
