

Take control of your Power Platform estate

Introducing the Hitachi Solutions Power Platform Control Centre as part of the Centre of Excellence

Administration & Governance Power Platform Control Centre

The strength that the Power Platform provides is the ability for all people within an organisation to quickly build low to no code business applications, automate business processes within and between multiple applications, data bases and more, it allows you to build artificial intelligence into your solutions and receive rich analytics and intelligent insights through advance reporting tools. This can be accessed by anyone with an Office 365, Dynamics or other license. Further to this there are 100's of 'out of the box' data connectors that, within a couple of clicks, users can authenticate too and connect multiple applications and services together.

— However, this strength can quickly become a nightmare for your business!

Hitachi Solution has developed a complete Centre of Excellence offering, part of this forms a 'Governance & administration' pillar. Part of this particular pillar is the 'Power Platform Control Centre' that centrally brings all your Power Apps (both Canvas & Model Driven) and Power Automates (Flow) from across all the environments within your tenant together into one central area. This allows you to keep track of not only the various applications and automations dispersed throughout your tenant but to keep track of which environments they are sitting in and who is making them.

The 'Power Platform Control Centre' is split into six key areas:

- 1. Power Apps**
- 2. Power Automate**
- 3. Environments**
- 4. Makers**
- 5. Ideas**
- 6. The Solution Hub**

The Power Platform Control Centre's Six Key Areas

Power Apps

The 'Apps' area allows you to have complete control over the Power Apps within your tenant.

Environments

The 'Environment' area allows you to view and administer not only the environments themselves but view the Power Platform components inside of the environment.

Ideas

'Ideas' is a Hitachi Solutions CoE concept which is the nucleus of the 'Makers' experience. This allows colleagues to submit an 'Idea' to the business by answering a sub-set of questions that the business will wish to know and understand to ensure the right level of support and governance is provided.

Power Automate

The 'Power Automate' area allows you to view and administrate your Power Automates that are located in environments across your tenant.

Makers

'Makers' are those who has built a solution using the Power Platform. Whether that is creating a new environment to host data or/and components, building Power Automates to automate workflows and more or designing Power Apps.

The Solution Hub

The Solutions Hub allows end users to search, view and request access and launch pre-existing Power Apps and Flows, search and view previously requested Ideas' and create and submit a new 'Idea'.

What is the value?

To summarise, what the 'Power Platform Control Centre' enables for your organisation is:

- Complete control over your Power Platform estate.
- One single view of the Power Platform components within you tenant.
- Ability to administer Power Apps & Power Automates with a click of a button.
- Easily administer your environment and view quickly which Power Apps and Power Automates exist.
- Quickly view a break down of your users and which Power Platform components they have produced.
- Easily see which connectors are being used and where.
- Easily govern and administer the creation of new Power Platform solutions/components.

“

The Hitachi Solutions 'Power Platform Control Centre' puts the control back in your hands.
