

HIVE THROUGHPUT MANAGER

Stream seamlessly in low-bandwidth network environments

Hive Throughput Manager is a ground-breaking solution designed to address the unique streaming complexities faced by enterprises in countries with notoriously challenging internet links, like China or India. This innovative tool is currently unmatched among other market vendors.

True edge functionality

Eliminates the need for maintenance and additional hardware or software.

AI-powered auto-configuration

Designed to self-organize within your network structure.

Patented technology

Proprietary technology, patents granted in Europe, the Americas, APAC, and China.

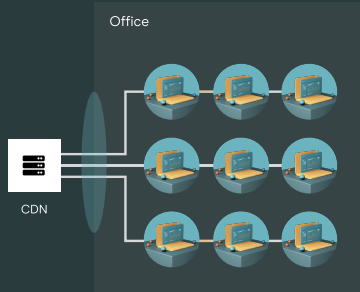

No single point of failure

Fully distributed solution that eliminates single points of failure.

How it works

With Hive eCDN

Best compromise network offload vs. video quality

With Throughput Manager

Minimal bandwidth load ensures video gets through

Granular control

Specific amount of bandwidth is allocated towards fetching content from the CDN to prevent network overload.

Smooth video streaming

All viewers across your network enjoy a reliable video experience regardless of existing bandwidth limitations.

Local network resilience

Network resources required for other essential business operations remain unaffected by streaming in low-bandwidth environments.

Purpose-built for the enterprise. Uncompromising security.

Designed with the specific requirements of large organizations in mind. Developed following ISO 27001 and SOC2 processes certified by EY.

Software solution to efficiently manage bandwidth & prevent network congestion

Works with your existing setup, no extra deployment required

Stable, reliable video for all employees across global office locations
