

**Protected. Secure.
Compliant. Confident.**

HTG's Cybersecurity Assessment Service helps you understand your current security posture and identify must-have improvements

Your modern, people-first workplace isn't complete without the confidence to use it effectively. With so many companies embracing remote working and cloud computing, cybersecurity has never been more important or, arguably, more taken for granted. That's why HTG offers qualifying companies a free Cybersecurity Assessment Service. Think of it as a health check for your IT security.

Cost: free. Value: priceless.

"Businesses and users are going to embrace technology only if they can trust it," says Satya Nadella, Microsoft CEO. We agree 100%. While many security specialists spread fear, uncertainty and doubt, our mission at HTG is to build trust and confidence so that your business can thrive.

Specially tailored for financial sector and housing trusts, our CyberSecurity Assessment Service helps you understand where you are now and delivers a roadmap for building confidence. Taking about a week, the process runs in three stages: assess, analyse and report.

What clients say

"I knew what I wanted and HTG, using their industry expertise and experience, helped us deliver that."

Brian Spence
Spence and Partners

"HTG has proven to be a valuable and trusted partner"

Sam Brown
Head of IT Operations & Infrastructure of Clarion

Assess

We temporarily install a secure Windows 10 virtual machine in your on-premise or cloud environment with an agentless scanning tool that analyses your IT infrastructure to give a point-in-time snapshot of your current security posture and potential weaknesses.

Analyse

Our expert consultants analyse the results of the technical audit. We look for common vulnerabilities and prioritise opportunities for improvement. We assess your overall maturity using the Center for Internet Security's best practice benchmarks.

Report

We deliver a 40+ page report detailing recommendations and a roadmap for improving your security. Covering areas such as software assets, access controls, data protection and more, it's an essential guide. Use it for reassurance or to build a business case for improvement.

Why HTG Security Assessment Service?

Verified security expertise

Our team of experts don't just talk the talk. They have passed some of the toughest certification requirements at the highest level. Among 150+ awards and accreditations, we hold ISO27001 for information security and management and the government-backed Cyber Essentials Plus. This means you can rely on HTG for trustworthy advice.

Identify 'unknown unknowns'

What you don't know can hurt you. We can help you understand your risks, explore 'unknown unknowns' and accurately assess technical vulnerabilities with your current IT systems. With IT security, an ounce of prevention is worth a pound of cure.

People-first, business-minded advice

Security doesn't exist in isolation. It's intimately connected to your organisation's business strategy, risk profile and compliance needs. That's why we start with a consultative approach and planning so we focus the right resources on the right priorities. Business leaders need the reassurance that they have taken all reasonable steps to stay secure. But employees too need the reassurance and confidence that comes from good security to be productive.

We've got your back

If you're up a certain creek, we can provide a paddle. We can help you adopt the latest Microsoft 365 technology and Azure Virtual Desktop, with all their built-in benefits for security, access control and information management. And we can provide ongoing technical support, security monitoring and proactive incident prevention from our Technical Support Centre.

Key use cases

Remote working

In this 'new normal', remote working is a necessary part of every manager's toolkit. The Security Assessment Service helps to build solid security foundations under your remote-working IT infrastructure.

Digital modernisation

We believe that security should enable change not stand as a barrier to progress. As you embrace digital modernisation, data centre optimisation or cloud migration, our Security Assessment Service ensures that you build comprehensive security, privacy and compliance into your plans from the start.

Virtual desktops

We're specialists in virtual desktops, including Azure Virtual Desktop. A move to virtual desktops automatically reduces the risks inherent in bring-your-own-device, home working and mobile device support. But it still needs solid security foundations to reap the full benefit.
