

# Data & AI Launchpad for Energy: 4-Week

Take your Energy Data & AI use-case from proof-of-concept and into an MVP production solution in 4 weeks

## CHALLENGE

- Identifying a business problem or data & AI use case, but internal teams are unsure about exact requirements.
- Projects with long delivery times and high costs that don't deliver value to the business.
- Development teams and consultancies inflate project scope unnecessarily.
- Extended discovery phases delay the most essential part of any development—getting real end-user feedback and evolving the solution.

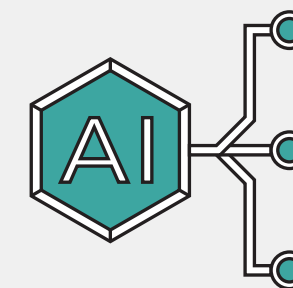

## APPROACH

Energy asset owner-operators, traders, route-to-market providers, and energy services companies have highly complex data requirements and need to develop and test quick solutions to maintain performance in an evolving market.

The Hypercube **Data & AI Launchpad for Energy: 4-Week** follows a defined process to ensure the optimal value is derived from the 4-week engagement, with guaranteed delivery of a tangible solution.

## 4-WEEK ENGAGEMENT

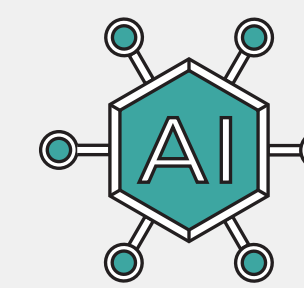

1

### Define Data/AI Use Case

- Work with your team to define objectives and clearly articulate the goals and expected outcomes from the engagement.

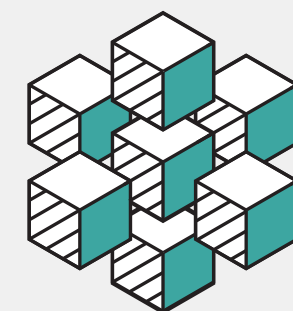

2

### Deploy Data/AI Model

- Capture feedback from your team throughout the process to iteratively improve the model efficiency.
- Deploy production-ready MVP.

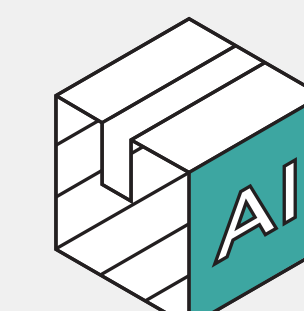

3

### Develop Data/AI Model

- Gather the required data that the AI model utilises for learning and predictions.
- The development phase includes model creation, testing, optimisation and scaling for production readiness.

4

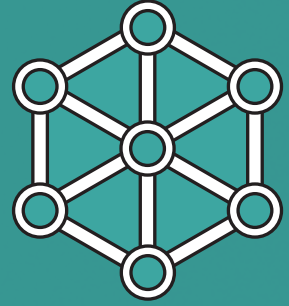

### Handover

- Provide backlog and future AI phases roadmap.
- Business user handover.
- Review of AI impact.

## OUTCOME

### Data and AI model

You will have a production solution (instead of Jupyter Notebooks).

### Evidence of value

Demonstration of value that can be shared with the wider business.

### Clarity

No confusion over cost of effort – fixed price and outcome.

### Solution roadmap

Your business challenge will have an MVP production solution, a subset of your challenge solved, and an actionable roadmap of where to go next.

**£30,000**

## UNLOCKING THE POWER OF DATA AND AI **FOR THE ENERGY SECTOR**

### ENERGY TECHNOLOGY PARTNER

Hypercube supports energy asset owner-operators, traders, route-to-market providers, and energy services companies to achieve world-class AI, data and analytics capabilities.

From time-series data platforms to energy forecasting MLOps – our experts have a deep strategic and technical understanding of energy markets to deliver value – fast.
