

# INTERGEN BUILDS TIMES-SERIES FORECASTING AND ADVANCED ENERGY TRADING

InterGen needed a modern data platform and AI strategy to enable smarter energy trading and reduce operational inefficiencies.

## Outcomes

- Designed and delivered a scalable data platform with integrated time-series forecasting to support trading decisions and market performance.
- Optimised the data estate, cutting costs by £3,000 per month and improving system efficiency.
- Established an internal data capability, embedding new tools and ways of working for long-term impact.

**“Working with a partner like Hypercube, which has experience working with other companies in the energy industry and can draw on the experience, allows us to take the time to grow our data team organically.”**

Christopher Wallace  
Head of Data and Analytics  
InterGen
