

New Generation Brand Protection Solution

Anti-Counterfeiting • Track and Trace • Consumer Marketing

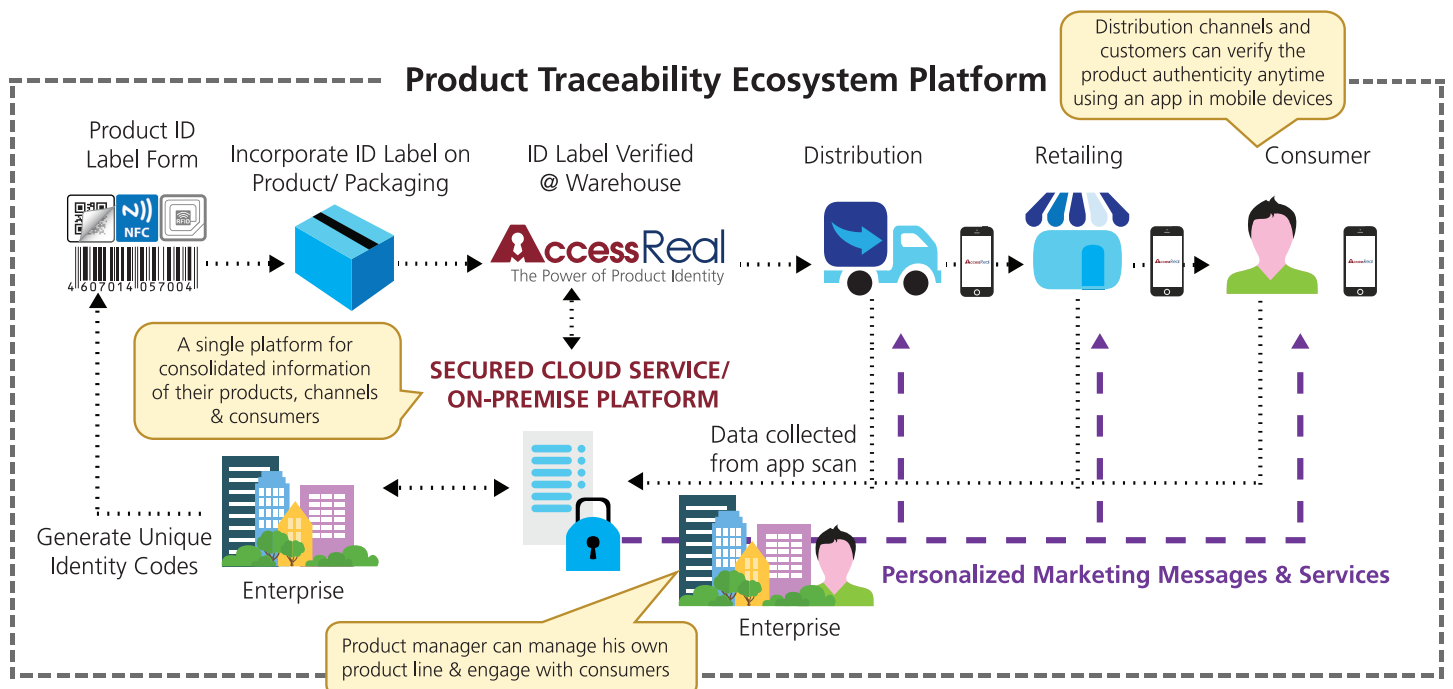

Addressing Enterprises and Consumers Concerns

»»» Introduction

AccessReal is a world class brand protection solution for anti-counterfeiting, track & trace and consumer marketing. By providing a unique Identification coding tag (barcode, QR code, clone-proof AR code, RFID, NFC, etc.) for each product, it allows companies to minimize counterfeiting activity, perform product logistics tracking, link customers to the product, and provide business intelligence for better business planning and direct interaction with customers.

Other than the bank-grade security features and data analytics capabilities, AccessReal also provides a mobile platform for consumers, distributors, resellers, and other stakeholders in the supply chain to leverage mobile devices to authenticate the products, receive news/ promotions, and establish direct communication.

Key Advantages

Unique Identity on Every Product

AccessReal provides a unique ID code to each product as an anti-counterfeit and tracking label, and supports multiple common product authentication methods.

Product Track and Trace in Supply Chain

By scanning the unique identity verification label, enterprise can check the logistic information to protect against counterfeits and product diversion.

Real-Time Business Data

Geography is automatically captured to AccessReal's secured backend system when a consumer scans the unique identification tag. Consumer purchasing habits such as when, where, what is also captured during the scanning. The product's identification tag scan activities include scan for enquiry, scan for authentication, and scan failure.

Consumer Engagement

Customized marketing system platform enhances the enterprise direct connection with retailers and consumers. Personalize marketing promotions/ messages will be pushed to the target audience to increase consumers' awareness and sales. Options of using the system to do loyalty management, gift management, warranty management and more are also available.

Bank-Grade Security Technology

AccessReal provides bank-grade level data storage security and end-to-end encryption technology to protect products' digital identity, authenticate anti-counterfeit identity code and prevent theft and attack. The solution ensures the data and information collected complies with the most stringent privacy laws and regulations.

Capabilities:

WeChat

»» Identification Tags

Enterprise can choose to implement AccessReal on their product using either single or dual layer identification tag type concept. Each tag type has its advantages - capable of recording the different status of the product. AccessReal supports various identification tags in the market. The following are the three most popular tags been used with the solution:

Clone-Proof AccessReal Code (AR Code)

- Unique digital watermark and the respective product identification DNA are added to a normal QR code with serialization and encryption protection to create the AR code. The secured AR code provides the copy proof feature to eliminate replication
- Can add simple logo/ wording on the AR code (Branding)
- Can directly print on the product packaging (Scalable cost)
- Ability to provide information on the product

Quick Response (QR) Code

- Can directly print on the product packaging (Scalable cost)
- Ability to provide information on the product

Barcode Tag

- Support one-dimensional barcode
- Can directly print on the product packaging (Scalable cost)
- Ability to provide information on the product

	Prevent Duplication	Fight Counterfeits	Analyze Consumer Behavior
1-layer Normal QR/ Barcode	No	Failed. Customers are further confused	✓ (limited)
1-layer AccessReal Secured AR Code	👍	👍	✓ (limited)
2-layer AccessReal Coding Scheme (Normal QR Code)	No	👍	👍
2-layer AccessReal Coding Scheme (AR Code + Normal QR code)	👍	👍	👍
