IBEXCATALOG

Infrastructure as a Service (IaaS) Accelerator

Cloud Migration

Overview

With this offer, Ibexlabs helps design and implement the migration of on-premise workloads to the Microsoft Azure platform.

This solution is perfect for any organization that currently hosts their data and services on on-premises servers and wants to migrate their workloads to the Azure platform to reduce costs. With this solution, Ibexlabs helps our clients take advantage of the security, efficiency and cost-effectiveness provided by Azure, without changing the way they're used to doing business. Azure resources can seamlessly work as an extension of an on-premise data center.

Hosting VMs in availability sets, availability zones and proximity placement groups for high availability for the apps, you'll never have to worry about losing data or connectivity because of catastrophic server failure.

Automated load balancing and dynamic scaling means that your data infrastructure scales with your needs automatically. With a pay-as-you-go model, you will only pay for the infrastructure that you use.

Security

Multiple layers of firewalls and intrusion detection services work 24/7 to keep your data safe.With automated compliance updates, your network will never fall out of regulatory compliance , including HIPAA , PCI and more.

Highlights

Powerful Infrastructure Built Around Your Needs

Infrastructure design, planning and implementation documentation on lift and shift of IaaS workloads

A highly available private network capable of hosting private and public environments, as well as applications.

Seamless integration with existing On-Premise Networks and Azure VNets.

Connectivity provided to existing Express Route or site-to-site VPN connections or connection via the internet

A Birds Eye View

Centralized auditing and compliance controls

Integration with Cloud Security Tools (Cloud Management Platform)
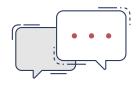

Top Tier Expertise

Provide overall migration plan, estimate and timelines

Define security structure and provide compliance assessment for the final infrastructure

Duration: 4 Weeks
Pricing: $20,000

Reference Architecture

When can we get started?

Full implementation of your application hosting platform takes about four to six weeks. During that time, Ibexlabs will help host or migrate your application with minimal user impact.

Ibexlabs has helped many customers over the years with cloud hosting and modernization and achieved multiple AWS competencies such as DevOps, Healthcare, MSP and is part of AWS Well Architected Partner program. We believe in customer obsession, transparency and **our reviews** speak to the results we helped deliver to our customers over the years.
