

## Baufest Application Journey to Azure

# REVALUING YOUR APPLICATIONS

We modernize your applications guaranteeing the availability of the service during the whole migration.

## THE TIME IS NOW

Obsolete applications can have a negative impact on the company's Brand image, maintenance costs and operational efficiency. However, **the decision to migrate them is often postponed due to the risk of losing business continuity.**

We apply AI solutions, like GitHub Copilot, to the whole Software Lifecycle (SDLC) to ease the transition, **minimizing risks and accelerating migration.** This allows our clients to **modernize and migrate to Azure** workloads that were too costly or risky in the past

## TRANSFORMATION IN 2 STAGES

### 1. UNDERSTAND AND PLAN

We work together with our clients in the development of a **migration strategy** that ensures business continuity and the design of a **customized modernization roadmap** that considers the three key aspects of the process: **technology, business, and people.** We use our knowledge in similar projects and tools like Azure Migrate in combination with GitHub Copilot to create this custom plan.

### 2. MODERNIZE AND EVOLVE

Using our specific methodology for modernization projects that has been consolidated over the years, we guarantee a safe and controlled transition:

**Technology:** we perform AI assisted reverse engineering to obtain a map of the current application and with direct engineering we define the architecture and Azure services that best suits the business needs: integration, infrastructure, scalability, security, and data management.

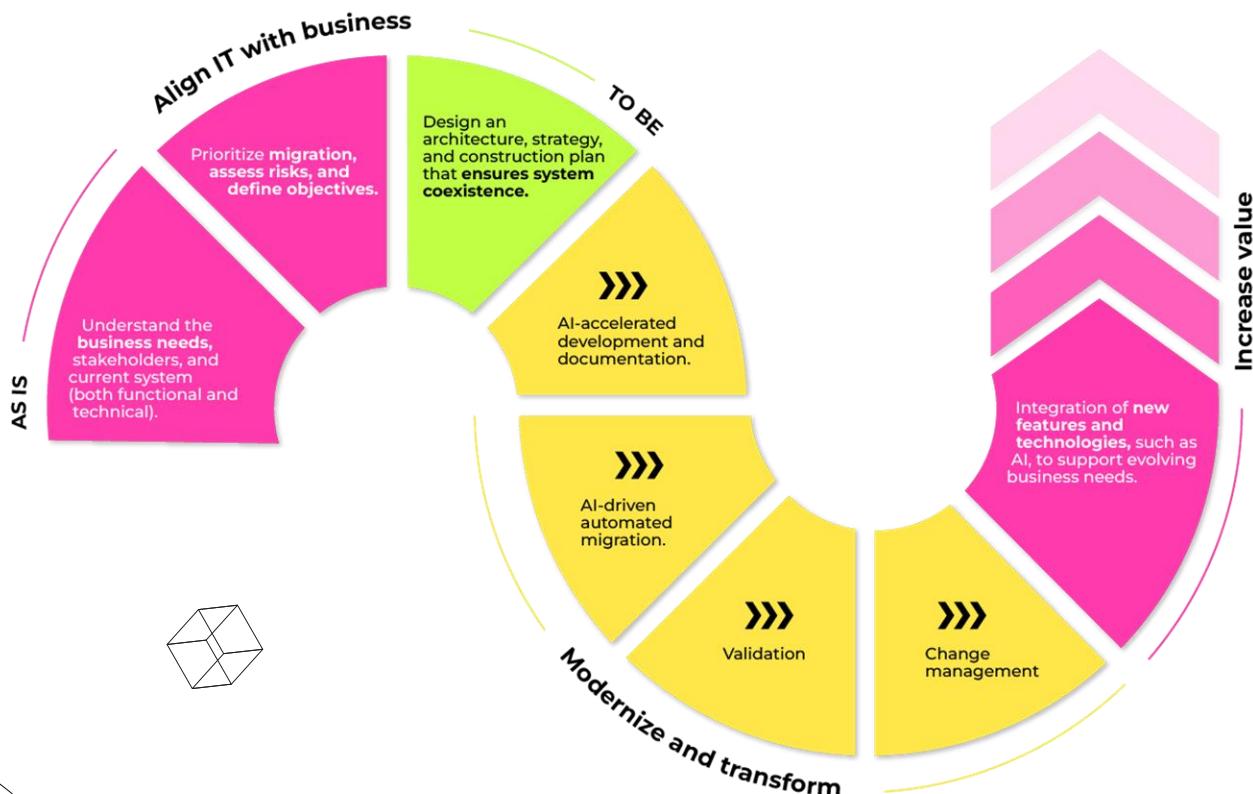

**Business:** we develop and implement the new application using specific processes that allow the coexistence of both versions during the transition.

**People:** we enhance the capabilities of the current team by training them in the new technology and we accompany users in the adoption of the new application.

# AI MODERNIZATION FRAMEWORK

## AN INVESTMENT WITH IMPACTFUL RESULTS

- Increased perception of brand value and better user experience.
- ~30% productivity gains by leveraging AI in the whole SDLC
- Standardization of the technology or platform and migration to Azure to reduce costs.
- Increased availability and security.
- Integration with core business applications.

### CONTACT US

to enhance and empower your applications in an agile way, without affecting **business continuity**.
