

The  
**NXT** step  
in internet  
of things

When business gives you  
lemons, **call OrangeNXT**

No excuses

Many companies find the transition from online management and monitoring of their devices and machines difficult. In fact, building your own scalable, robust and well-secured IoT Cloud is not easy.

When developing the conNXT IoT Cloud, OrangeNXT has already done the heavy lifting for you. conNXT ensures that you can reduce your costs within a minimum amount of time, while increasing customer satisfaction.

## START MONITORING YOUR DEVICES. TODAY!

### Transparent insight

In addition to real-time insight, ConNXT's device management offers you a transparent overview of the status of all your devices and machines. conNXT provides a wide range of direct actions as well as the status and history of events to identify potential problems.

### Simple integration

Any platform that can communicate via MQTT or AMQP can be connected to our Cloud. For even faster integration, you can also use C# or C++ software connectors or your eWON.

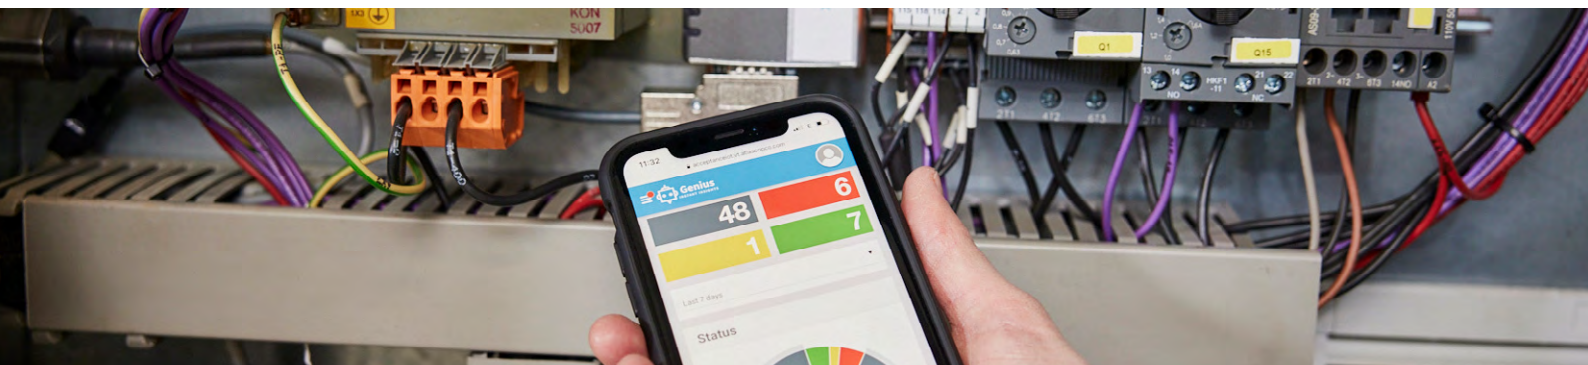

## IMPORTANT FUNCTIONS

- Use the conNXT dashboard to see whether any devices are offline or in malfunction
- Check the device status or message history in order to determine what is going on and perform remote remedial actions
- Analyse telemetrics data to understand the performance of your machine
- Use the reporting features to identify which devices or machines are experiencing the most problems

### Security and privacy

conNXT collects information. Depending on your application, this may involve business or privacy-sensitive data. Adequate security is therefore of paramount importance. Moreover, security must

comply with Dutch and European legislation. For conNXT projects, this includes:

- OrangeNXT complies with the ISO27001 standard for information security.
- OrangeNXT and conNXT customers sign a data processor agreement.
- All data communication is secure and encrypted.
- Access to portals and apps uses authentication and role-based authorisation.

**Digital innovation**

When you choose conNXT, you take your first step towards digital innovation. The 4C OrangeNXT's Digital Innovation Model is the beginning of the process of moving to digital operations. Our 4C model comprises four levels: operational efficiency, transparent insight, business innovation and business transformation.

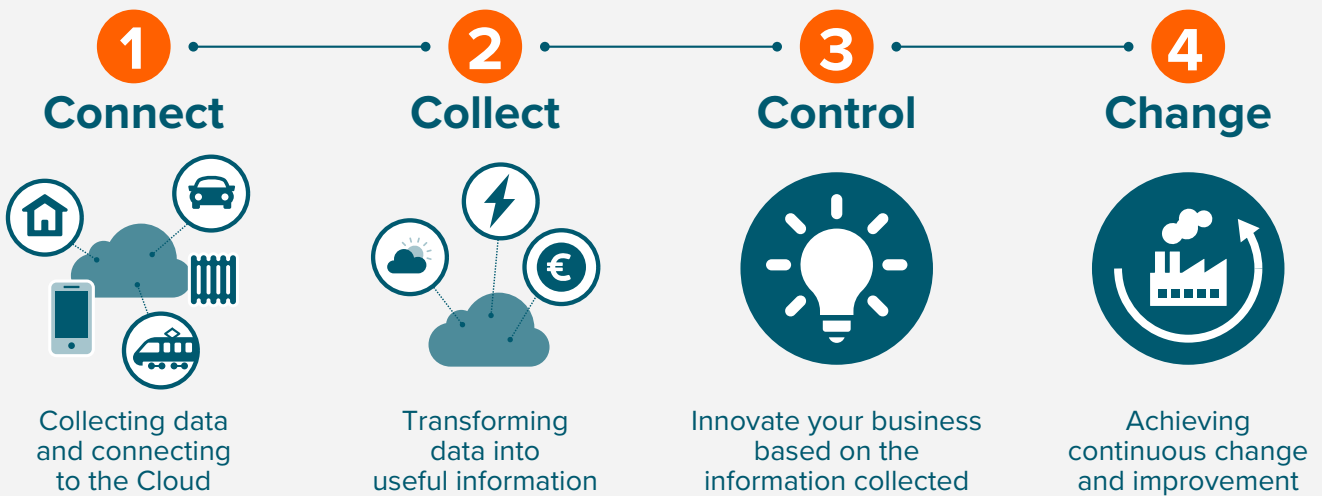

**Start today!**

**From just €600 p.m.**

You don't need to make a long term commitment - contracts can be terminated on a monthly basis

# The four C's

Our model delivers **digital innovation** to any business in **four steps**

## About OrangeNXT

OrangeNXT uses its in-depth knowledge and experience in digital innovation for creating plug-and-play products and solutions. This allows customers of OrangeNXT to fully benefit from faster and more efficient deployments. OrangeNXT is a subsidiary of ICT Group.

We define digital innovation as the smart connection of people, devices and data. People generate data with every step they take, every mouse click and every item of data they enter. Even machines and other assets generate data. IoT allows you to effortlessly incorporate this data into real time collection. Digital innovation involves much more than just eliminating paper-based processes.

# DIGITAL INNOVATION: THE SMART CONNECTION OF PEOPLE, DEVICES AND DATA

You can make smarter use of your data by discovering new connections and setting up fully automated processes. This will make human-executed, labour-intensive and repetitive work
