ICT ANALYTICS

AZURE MODELLING SERVICES

Planning migration to Azure and need to accurately simulate and optimise the projected cost?

WORKLOAD COST MODELLING

Create **workload groups**, then simply drag and drop onto **Azure resource groups**, simulating migration destinations and creating a **detailed projection of the costs**.

MIGRATION SIMULATION TOOLS

We can help you accurately simulate, model and migrate to **Azure** Cloud, enabling you to make the **correct strategy decisions**.
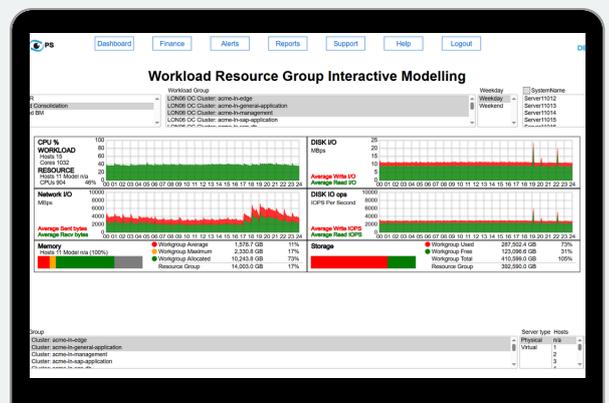

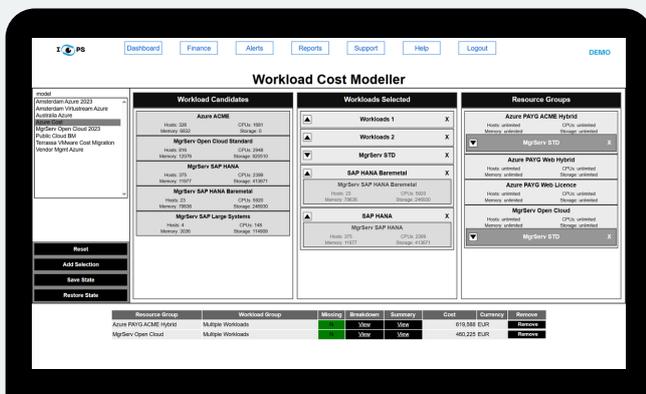

Are you able to assess the cost of Azure before migrating to the Cloud?

FORECASTING

Abstraction of the workload profiles & business applications allows "what-if" modelling to determine the optimum way to migrate your environment.

BUSINESS CASE

We can provide business case support or justification for your migration to Azure.

AUTOMATED PART NUMBER SELECTION

Sophisticated algorithms determine the optimum part numbers in Azure which can be over tens of thousands for one resource type – e.g. Compute.

ONLINE PORTAL

All analysis results available through an interactive web-based portal.
