

Protected business

SecureFabric SME MDR

Liquid's SecureFabric SME MDR is enabled by Xcitium and is a complete security solution that delivers preventative protection, post-breach detection, automated investigation, and incident response. As businesses and the technical architectures that support them evolve, perimeter-less security is becoming the new normal.

With this comes new risk requiring alternative strategies for response and mitigation. To minimise cyber security risk to your business, it is essential to gain visibility of and rapidly identify and shut down cyber threats. Being able to do that 24/7 is another challenge.

Key Benefits and Features

Unparalleled Visibility

- Multiple-source data collection to detect and pivot across the kill chain
- Built on the industry's deepest insight into threats and shared signals
- Machine-level vulnerability context during incident investigations

Exceptional Threat Detection

- Powered by global-scale threat intelligence
- Expert-level threat and behavioural monitoring and analysis
- Advanced threat hunting across whole estate

Expert Response:

- Respond to sophisticated threats in minutes
- Analyst-driven security incident management
- Automated containment and mitigation

Differentiators and Value Adds

- Security recommendations and best practice advice for improved cyber security posture improvement by our SecureAdvise team
- Empower in-house teams with access to Liquid's security expert oversight, assistance, management, or support via our SecureSupport, SecureSolution and SecureDeploy, or SecureManage teams
- Seamless integration across Microsoft Security portfolio and our backend tools, e.g. ServiceNow based ticketing and Incident Management
- 24x7x365 real-time monitoring, management, detection, incident response, and actionable threat intelligence to enable proactive threat defence

Service Options

1. **SecureFabric SME MDR Plus:** Advanced Endpoint Protection (AEP), as well as Endpoint Detection and Response (EDR) for endpoints and servers
2. **SecureFabric SME MDR Advanced:** Advanced Endpoint Protection (AEP), Endpoint Detection and Response (EDR) for endpoints and servers, Network sensor, Extended external sources, e.g. Office 365, Microsoft Active Directory, firewalls, IPS, etc.
3. **Note:** Our Secure Fabric SME MDR is focused on customers with 250 and less devices.
