DINO

The most accessible way to add fields

in Microsoft Dynamics 365 Business

Central without any coding.

idyn

DINO is a tool for users, consultants, and developers to easily add customizations in Microsoft Dynamics 365 Business Central.

What is DINO?

DINO is the most accessible tool to add fields to tables within Microsoft Dynamics 365 Business Central.

In the "Age of Dinosaurs" (the NAV period) it was quite simple to add a field to a table and make it available on the related page. However, in the "Modern Age" (The Business Central period), it has become more complicated to add a field. There's coding involved, and it usually takes up development time to perform this seemingly straight-forward exercise.

We at idyn, are excited to live in this "Modern Age" but we realized users are missing out on some handy features from the "Good Ol' Days." ;-)

That's why we created DINO, a simple and low-cost tool to create instant customizations in Business Central.

Why Choose DINO?

Dino is our favourite throwback app for Business Central, with a cheeky reference to dinosaurs. As much as we love Business Central, we're bringing back some of the customizability that was available in NAV. If you want a no-code, low-code and no-risk tool to take back control over the flexibility of Business Central, try out DINO!

DINO

Customize you Business Central

Add fields to tables and pages in BC

Pay and deploy customization

User payment for access cusomtized pages

How to use DINO:

Add fields to tables in the following easy steps:

1. Download DINO from AppSource

2. Open the DINO wizard

3. Choose which table to add one or multiple fields to

4. Add the Field: (Field Number, Name, Caption and Data Type)

5. Link the field(s) to the accompanying page(s)

6. Pay € 1,- or $ 1,- via PayPal to finish the wizard
   A. Deploy the customization to your environment
   B. Export and store the custom app and import it in another environment with another DINO license.

7. Users will prompted automatically to pay € 1,- or $ 1,- via PayPal to gain access to the customized page(s).

8. Start using the added field(s)

For whom is this app interesting?

For every Business Central user!

DINO is interesting for end users who want take control over their Business Central.

DINO is interesting for Microsoft partners because they now can make minor changes to the Business Central platform of their customers without any coding required. Consultants can add fields easily, similar to working with NAV versions.

DINO saves you and your customers a lot of time and effort.
