# ALWAYS ON

## Business Impact:

Empower your IT teams with a single AI-native platform that proactively monitors, predicts, automates, and resolves operational issues across your enterprise.

**Up to 100%  
Visibility**

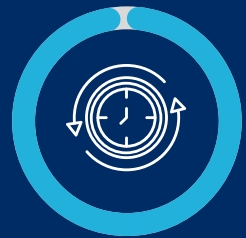

**Up to 80%  
Faster MTTR**

**Up to 60%  
Less Effort**

**Up to 40%  
Lower Costs**

**Up to 99.9%  
Availability**

**GYAANi ITops360.AI unifies people, process, data and technology to deliver AI-driven, autonomous IT operations across your entire enterprise.**

**GYAANi ITops360.AI – Intelligent AI Driven Operations. Business Always On.**

Why it matters

# Modern IT is fragmented.

Operations should not be.

”

Enterprises are running on **7–12** disconnected tools across monitoring, ITSM, log analytics, automation, and compliance, creating operational chaos, slow recovery, and rising costs, leading to:

<https://www.ifixtechglobal.com/>

- **Siloed operational data**
- **Alert fatigue from disconnected systems**
- **Slow root cause analysis and high MTTR**
- **Manual incident management across tools**
- **Limited predictive insight and self-healing capability**
- **Excessive licensing and operating overhead**
- **Weak team alignment and poor executive visibility**

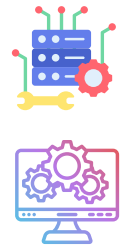

The solution

# Unify and orchestrate the enterprise IT ecosystem

- GYAANi IT Ops 360.Ai replaces or orchestrates the enterprise operational toolchain through one platform, one view, and one team
- It is an enterprise AI-powered ITops, SecOps and ServiceOps platform built on GYAANi Rel 5.0 with four power engines: Solution GPT, Agentic EUC, aiSM-TrustAI and API Library

**See how GYAANi IT Ops 360.Ai replaces fragmented tools with one AI operations platform**

## Traditional IT Operations

|                           |                            |                          |
|---------------------------|----------------------------|--------------------------|
| Infrastructure monitoring | SolarWinds, Nagios, Zabbix | Siloed monitoring        |
| ITSM                      | ServiceNow, Jira, Remedy   | Manual ticket operations |
| Log analytics             | Splunk, Elastic            | Huge log volumes         |
| Alerting                  | PagerDuty, Opsgenie        | Alert fatigue            |
| Automation                | Ansible, Rundeck           | Fragmented scripts       |
| Observability             | Datadog, Dynatrace         | Multiple dashboards      |
| Compliance                | Excel, manual audits       | Slow audits              |
| Asset management          | Lansweeper, Device42       | Disconnected CMDB        |

## GYAANi ITOps360.AI

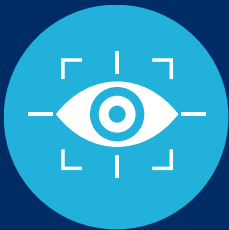

|                              |
|------------------------------|
| Unified AI operations        |
| AI-driven service management |
| AI event intelligence        |
| Smart correlation            |
| Centralized orchestration    |
| Unified visibility           |
| Continuous compliance        |
| Unified asset visibility     |

# Deployment models

**SaaS Cloud | Hybrid Cloud | Private Cloud | On-Premises**

## Standalone platform

Replace multiple operational tools and make GYAANi IT Ops 360.Ai the single enterprise command center for all IT operations

**Monitoring**

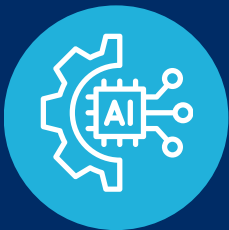

**Alert management.**

**ITSM**

**Compliance**

**AI operations**

**Asset discovery**

**Workflow automation**

**Executive reporting**

## AI orchestration layer

Sits above existing enterprise software as an intelligent orchestration overlay, with no rip-and-replace required

**Integrating existing tools**

**Workflow automation**

**Centralized AI dashboard**

**Executive visibility**

**Cross-platform correlation**

**Autonomous remediation**

**AI root cause analysis**

Impact in action

# AI in action. Real results

## 01. Self-healing

**Windows disk space auto-healing, replacing SolarWinds, ServiceNow, and PowerShell**

- MTTR reduced from 3 hours to 5 min
- 92% reduction in manual intervention
- Improved production uptime

## 02. Intelligence

**AI incident correlation, replacing Splunk, PagerDuty, and manual RCA**

- 90% reduction in alert noise
- Faster root cause analysis
- Improved SLA performance

## 03. Automation

**Active Directory lockout automation, replacing service desk and AD admin teams**

- Reduced service desk tickets
- Faster employee productivity
- Reduced support overhead

## 04. Compliance

**Compliance and CIS governance, replacing manual audits and spreadsheets**

- Continuous compliance visibility
- Reduced audit effort
- Improved governance posture

## 05. Predictive AI

**Predictive infrastructure failure detection, replacing traditional monitoring tools**

- Reduced unplanned outages
- Improved infrastructure resilience
- Better operational planning

Measurable outcomes

## Business outcomes that matter

**Always On  
Operations**

**Resilient IT  
Services**

**Happy Users  
Better  
Experience**

**Business  
Agility &  
Innovation**

**Cost Efficiency  
Operational  
Excellence**

Core capabilities

## Built for the full operations lifecycle

Real-time Monitoring Across Entire IT Stack

ITSM Integration & Ticket Automation

AI Insights & Predictive Analytics for Proactive Operations

SLA Monitoring & Incident Management

Autonomous Detection & Remediation

Role-based Dashboards & Executive Reports

Event & Alert Correlation with Context

Audit Trails, Compliance & Governance

Industry fit

# Built for every enterprise vertical

## 01. BFSI

- Core banking monitoring
- Fraud operations visibility
- ATM monitoring
- Regulatory compliance

## 03. Manufacturing

- Plant monitoring
- Predictive maintenance
- OT/IT visibility

## 02. Healthcare and pharma

- GxP compliance workflows
- Hospital IT operations
- Lab system monitoring

## 04. Retail and e-commerce

- POS monitoring
- Website monitoring
- Peak traffic management

Personas

# Designed for the teams that run operations

### Business user

Raise requests, track incidents, and interact with AI assistant

### Approver

Approve changes, workflows, and escalations

### Analyst

Manage incidents, perform RCA, and monitor operations

### MIS / reporting

Generate analytics and operational reports

### GYAANi admin

Manage platform, workflows, and integrations

### Super admin

Tenant management and enterprise governance

Strategic value

# Why enterprises choose IT Ops 360.Ai

01.

Lower total cost of ownership by consolidating **7-12 tools** into one platform and reducing redundant licensing and overhead

03.

**AI-driven operational intelligence**, including incident correlation, root cause analysis, and predictive failure detection

05.

**Continuous compliance readiness** through automated CIS mapping, risk scoring, and audit dashboards

02.

**Centralized enterprise visibility**, with role-based dashboards for analysts, business users, approvers, MIS teams, and leadership

04.

**Self-healing automation**, reducing manual intervention with autonomous remediation workflows

06.

**Scalable hybrid and multi-cloud** support across on-prem, cloud, and OT/IT environments

# Ready to unify your operations?

CYAANi ITops360.AI adapts whether you are consolidating tools or adding an AI layer above existing systems
