

Are You At Risk?

84% of enterprises have high-risk vulnerabilities on their external networks and don't know it.

Regular scanning has been shown to lead to a 250% reduction in downtime for organizations who are more proactive.

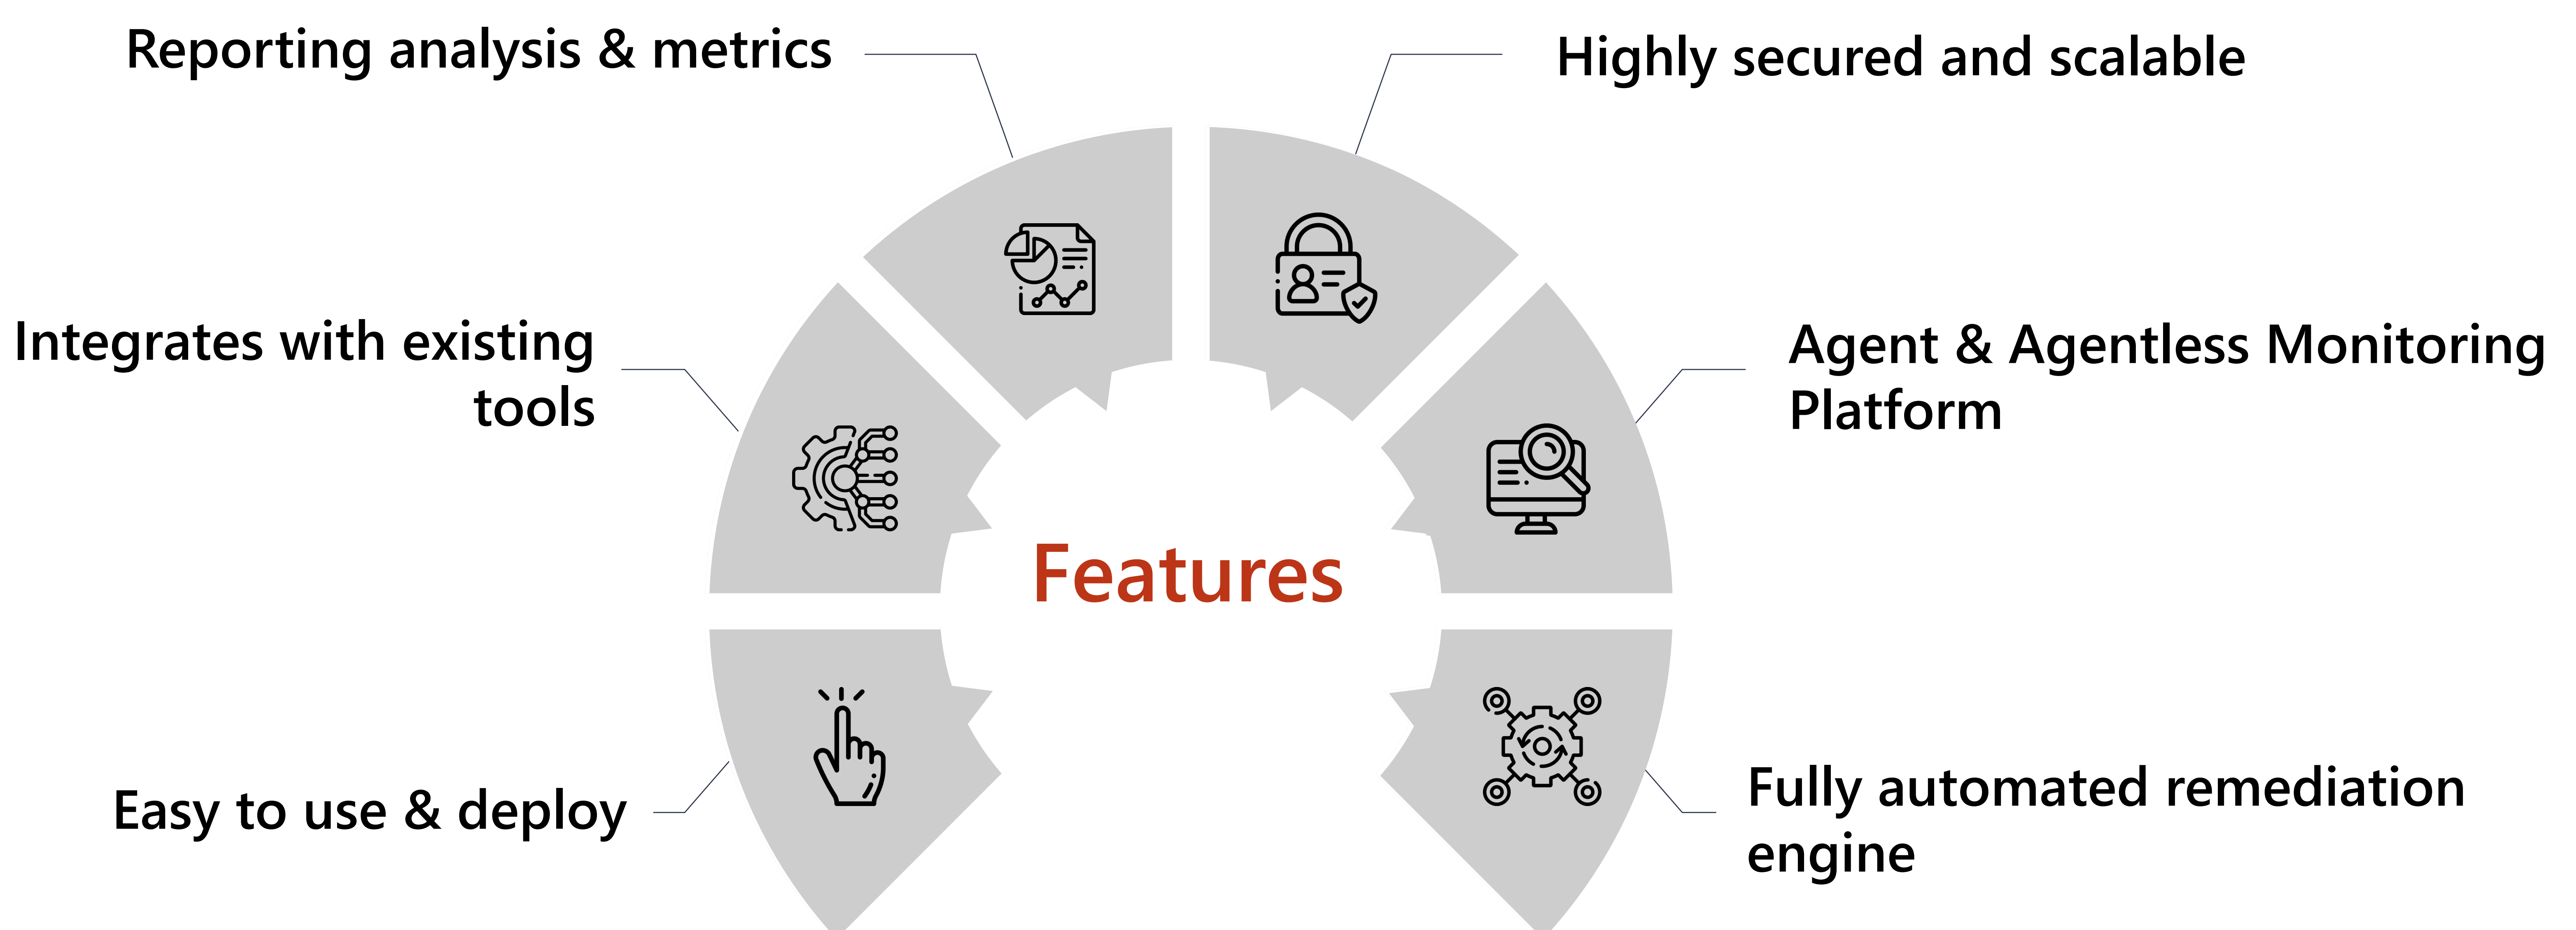

Beak's VDR platform stops threats before they're a problem.

Detect & Remediate Your Organization's Exposure

Beak's Vulnerability Detection & Response (VDR) platform offers continuous monitoring to detect, prioritize, and fix vulnerabilities so you're able to manage and secure your IT Assets effectively. Using the VDR solution, customers receive security warnings before it is too late and can focus on remediating the vulnerabilities that matter the most.

VDR provides a real-time Assets or dynamic Software Bills of Material (SBOM) that can help gain greater visibility, meaning your enterprise is more secure.

Unparalleled Customer Support

Our experts are available via email, call or chat 24/7 and able to support your needs through a remote assistance session at any time. We also provide a dedicated customer success manager to ensure a frictionless onboarding and implementation.
