Strategy & Governance

With our COE solution, we address best practices in security design, and our governance model allows business groups to focus on solving business problems.

01

Environment Strategy

Developing an environment strategy means configuring environments and other layers of data security in a way that supports productive development in your organization, while securing and organizing resources.

02

Security Policies

To control who can access Power Platform in an environment and access data, licenses, and environments, Azure Active Directory and Data Loss Prevention policies.

03

User Roles & Groups

Security roles control a user's access to data through a set of access levels and permissions.Using security groups to control which licensed users can access a particular environment.

100+ Frameworks & Accelerators for Rapid Time to Value

Empower

Our COE solution includes a set of monitoring and optimization tools to help organizations identify and address issues with their Power Platform solutions, and ensure they are running efficiently.

01

ALM Development
Identifying current problems, and planning, designing, building, and testing the application and its continuous improvements.

02

Accelerators
Extend the capabilities of the Power Platform connecting it to new and existing apps.

03

Error Handling
The handling of errors is critical to maintaining business continuity, and good error-handling practices can help avoid critical incidents.

04

Role Based Access
Role Based Access ensures employees access only data they need to access and prevents them from accessing information that doesn't pertain to them.

Enable

Configure a COE Toolkit, conduct trainings and workshops, and provide ongoing support.

01

COE Toolkit Configurations

The Center of Excellence(CoE) Kit is a collection of components and tools that are designed to help you get started with developing a strategy for adopting and supporting Microsoft Power Platform.
