

What Makes it Elite Fire?

ImageTrend Elite™ Fire is a complete RMS data solution for fire departments. It has everything you expect and more to conduct inspections, document fire incidents and manage fire operations.

Reporting for Your Fire Data

ImageTrend's Report Writer lets you create ad hoc or canned reports on your NFIRS 5.0 data. Built-in reporting tools are already designed for the reports you need for budgeting, grants, ISO accreditation, training and more.

Fluid, Configurable Forms

Create your own forms to optimize your department's workflow using ImageTrend Elite's Form Manager. Choose the fields and order of display for rapid data entry. Use default answers to save documentation time in routine situations.

Save Time with the Library

User-generated content from your peers in other departments can be shared with the Library. Find forms that others have found successful and share the wealth of knowledge in the ImageTrend community.

Centralized Data Collection Settings

Take in-depth control with centralized management of your fields, their value ranges, validation and mapping for import/export data exchange. The Data Manager lets you activate or inactivate values and change the labels for any choice that appears in a drop-down menu. Create Plus-One codes to enhance your reporting.

Locations/Occupants/Inspections Module

Expand fire operations capabilities with the Locations/Occupants/Inspections Module. Record data in this cloud-based system where it is secure and safe with backups. Update and reference records from virtually anywhere with an internet connection.

Offline Inspections

ImageTrend Elite is a cloud-based system that works anywhere with an internet connection. With optional Inspections Field, a building inspection or preplan can be started and completed offline and submitted when a connection is restored. An encrypted database on the local device keeps the data secure from unauthorized access.

Powerful for States, Flexible for Counties and Cities

Not only is ImageTrend chosen more than any other vendor for statewide fire or EMS data collection; it is also the most flexible for municipal and countywide departments. Enterprise architecture ensures smooth data rollup from the scene of the incident to nationwide reporting systems.

Available Investigations Module

This module allows your investigators to document all aspects of a fire-related investigation, including such things as witnesses, evidence grids and weather related information.

Trusted Data Hosting and Support

With millions of NFIRS 5.0 records hosted and proven experience, you can be confident in your data integrity. ImageTrend support is available by phone, email and a powerful ticketing system to keep you informed.

Other Capabilities and Modules

OPERATIONAL

- Locations/Occupants/Inspections
- Inspections Field
- Hydrants
- Preplanning
- Checklists
- Training and Activities
