# Reporting Platform

Imendo takes Business Intelligence and its data to a
new level.

Sometimes it is hard to acquire the data you need.
Reporting Platform helps you and your employees with slim
designed web applications to manage your data.

What is Reporting Platform?

Reporting Platform combines the visual aspect of Power BI with a web
application, which enables your employees to easily manage and prepare the
data you need and everything around it.

Why customers use Reporting Platform

- A Single, Unified View of Your most needed Data

- Manage Data in an Easy Way

- Wide Set of Tools and Flexibility

- Comprehensive and Precise

- One Application for a Single Point Of Access in Your Organization

Provide Data To Everyone

- Utilize gathered data in Microsoft Power BI and Power BI Embedded to provide your reports within your organization

- Use custom authorization protocols (like PVP, SAML, OAuth) to access your data and reports via custom web applications

Organize Your Data

- Gather and manage data from across your organization in fully customizable web applications

- Make use of the vast features of HTML5, ReactJS, SharePoint, Elastic Search, in separate modules (applications)

Improve Quality & Efficiency

- Give your employees a Unified Way to gather data.

- Use the same Environment for different use-cases

- Reduce costs for server and software license

Cost efficient

The Reporting Platform helped the Federal Ministry of Digital and Economic Affairs to establish a
Platform for its various sections, who gather data independently and combine the gathered data
in reports for the management level. – *Mag. Siegfried Kabasser*
