- Industry-specific and product-specific **training** to enhance usability for clients
- **Upgrades** and version update control to manage technological changes and company growth

## MICROSOFT DYNAMICS 365

Think about all the separate software applications you use in your job every day. An ERP system for operations, a CRM solution for sales and marketing, Outlook for email, Excel for your spreadsheets, Skype for communication, to name a few – that's a lot of detached applications where your data is isolated and being stored.

If you are currently running Office 365, Power BI, and any Dynamics product on your computer, they are all separate entities. You have to leave one application to go to the other. For years, we have all lost hours of productivity and patience switching between Excel and an ERP system but not anymore. Microsoft is closing that gap with Dynamics 365.
