

Imperium Project Management

Efficiently manage project workflows, resources, and approvals with Imperium's Project Management solution, designed to streamline complex project operations with ease.

Built on Microsoft's Power Platform, this robust project management solution helps organizations plan, execute, and monitor their projects efficiently. From allocating resources to managing change requests and forecasting project outcomes, our project management solution simplifies every step, ensuring your team stays productive and aligned.

Features

Resource Allocation and Planning

Effortlessly assign resources to the work plan and populate roles, and hourly rates for each phase of the project. Resource allocations can be reviewed and adjusted as work progresses, ensuring the right people are allocated to the right tasks. Configure weekly email notifications to inform resources about their allocations. Business processes within projects are color-coded for better visibility and management, with templates available for recurring resource plans—saving valuable time in setup.

Change Management: Change Order Requests & Scope Adjustments

Handle changes in scope or timeline effortlessly with integrated Change Order and Change of Scope Requests. Automatically calculate and reflect project deviations in both budget and timeline. Scope adjustments are built directly into the work plan for seamless transitions, ensuring that new requirements are addressed without disrupting the project's overall progress.

Seamless Integration with Time Entry Systems

Our solution integrates with hourly time-entry systems, enabling real-time visibility into resource allocations and project progress. This ensures accurate invoicing, resource planning, and smooth project execution.

Configure Projects and Link Business Processes

Configure projects, define business processes, associate phases and assign durations seamlessly. Link the work plan with the project, ensuring that details such as resources, timelines, and roles are easily populated.

Real-time Submission and Forecast Tracking

Track real-time submissions from your team as they log hours against assigned tasks. This data is fed directly into the project management interface, clearly comparing estimated and actual hours. Color-coded alerts make it easy to spot discrepancies, enabling swift adjustments and forecast updates to keep projects on track.

Approval Workflows

Manage approvals with a streamlined workflow that routes Change Order Requests and Work Plans to the appropriate decision-makers. Whether it's the Director of Project Management or another stakeholder, the solution ensures that approvals are documented, and changes are applied efficiently, helping projects stay aligned with organizational goals.

Invoicing & Budgeting

Invoicing is automatically calculated based on the hours allocated and pay per hour for each resource. This ensures accurate financial tracking throughout the project. Budgeting features allow for the monitoring of project expenses, providing visibility into cost projections and actual spending as the project progresses.

Why Choose Imperium's Project Management Solution?

1 Real-time Forecasting & Reporting

With an intuitive interface, you can easily review forecasted versus actual project outcomes, allowing for quick adjustments to stay on target.

3 Seamless Collaboration & Change Management

Empower your teams to work effectively with integrated tools for managing change requests, resource reallocation, and scope changes—keeping your projects aligned with business objectives.

4 Efficient Approval Processes

Automate approval workflows to accelerate project timelines and ensure that project managers and directors can approve and implement changes without delays.

5 Scalability for Complex Projects

Whether your projects involve a small team or large, multi-department initiatives, our solution scales to meet the demands of any organization, making it suitable for all industries.

2 Automated Resource Allocation

Reduce manual efforts using templates and automated resource allocation, ensuring your team is always working efficiently.

Use Cases for Project Management Solutions

IT Services

Project management is crucial for delivering software solutions, cloud migration, or infrastructure upgrades in IT companies. Imperium's solution helps allocate developer hours, track time spent on tasks and manage change requests as project scopes evolve. It ensures that IT teams can stay on track while adjusting to changing client needs, enabling faster project delivery with better resource management.

Law Firms

Law firms often juggle multiple cases with strict deadlines, requiring efficient time tracking and resource management. Imperium's solution helps allocate legal teams to specific cases, track billable hours, and manage client-driven changes. This ensures accurate billing and resource utilization, allowing firms to handle more cases without sacrificing quality or efficiency.

Construction

Coordinating labor, equipment, and timelines across multiple job sites is key in the construction industry. Imperium's Project Management Solution enables automated resource allocation and project tracking, minimizing delays and cost overruns. Real-time forecasting helps project managers quickly adjust to meet deadlines and stay within budget.

Consulting

For consulting firms managing client engagements, resource planning is essential for billing and project delivery. Imperium's Project Management Solution streamlines the allocation of consultants to projects, tracks hours worked versus estimated and simplifies invoicing. This increases billable hours' accuracy and ensures that projects meet client expectations on time and within scope.
