

# IMS remote workstations

Empower your developers and testers to work from home or anywhere in the world by spinning up powerful and pre-configured workstations with IMS in the Azure cloud

## What it is

The total onboarding time to get you started is **3 working days**: The initial 2 days will involve experienced IMS engineers looking deeply into your team's hardware, software and tooling needs for different roles and locations.

The following 1 day will be used to consolidate findings and set up your account with pre-configured profiles for different roles on our system. Afterwards, you can spin up pre-configured virtual workstations in the Azure cloud with expert support from our team around the clock.

For the **managed service** we provide, we charge a fee of **15%** of workstations' hosting costs. Price for the onboarding varies from **\$4.800 - \$9.600** depending on the size of your team.

*“With IMS we have a team of top tier engineers who live and breathe multiplayer development underpinning our work as a studio”*

Josh Holmes, CEO Midwinter Entertainment

## How it works

1. Initial planning call(s) with our experts to understand your teams' requirements
2. Access to comms platform, workflows, team etc.
3. Onboarding session to set up your account and pre-configured profiles
4. Ready to spin up pre-configured virtual workstations for your team

## Why do it

- Onboard new talent & contractors right away without disruptions from global supply chains
- Reduce cost and complexity of managing and shipping hardware globally
- Ensure secure and efficient QA testing across remote and external teams
