Improving's Fabric Offering

2024

Fabric in Context › Your Organization

What about my existing Microsoft analytics solutions? *(aka Are Synapse or Data Factory being discontinued?)*

- Microsoft: '*Existing Microsoft products such as Azure Synapse Analytics, Azure Data Factory, or Azure Data Explorer, will continue to provide a robust, enterprise-grade PaaS solution for data analytics. Microsoft Fabric represents an evolution of those offerings in the form of a simplified SaaS solution that can connect to existing PaaS offerings'*

Should I adopt Fabric?

- With the huge innovations and potential for simplification and fast ROI, it should be considered.

- Factors such as your existing architecture and solutions, your teams' skillsets, and readiness for change are key.

Scenarios to consider:

- I want to use Fabric with my existing solutions

- I want to fully migrate my existing solutions to Fabric

- I'm not ready to adopt Fabric today, but I want to keep my options open

improving

Fabric Assessment and Implementation

Data Governance Assessment and Program Development

- Fabric makes it easy for your organization to ingest, prepare, utilize, and share data. Are you prepared for this?
- We can support in assessing and developing your data governance strategy and program.

Data Architecture and Strategy Discovery and Assessment

- Is Fabric a good fit for your organization? What should you do to 'keep your options open' for adopting it?
- We can help you assess readiness for integrating or migrating to Fabric – make your implementation a success!

improving

Microsoft Fabric Offering

Identification of Data Analytics Challenges

- Conflicting Data Analytic platforms, on-premise, cloud
- High licensing and support costs
- Poor reporting performance
- Lack of Data Governance
- Manual reconciliation
- Unreliable data sets
- Data duplication
- Data sprawl

Integration Of Your Data With Microsoft FABRIC

- Validate your data
- Automate data consolidation
- Assure data security and integrity

DURATION: 2 Weeks
PRICE ESTIMATE: $25,000

Our Microsoft Fabric experts will collaborate closely with your teams to analyze your current data analytics state and develop a future data analytics architecture. We will share best practices and outline the necessary skills and knowledge to accelerate your analytics journey.
