Incremental Application Modernisation Assessment

1 Planning

Help you identify your business goals and objectives

- Segment and prioritise each application based on its Cloud Ready Index and its business impact to the organisation.

2 Data collection

Give you a clear picture of your current application estate

- High accuracy architecture and code analyser scans 100'000s of lines of code in minutes to get details on the code changes needed and where they are. Tracks software resiliency, security and efficiency throughout the journey.

3 Data analysis

Analysis of your app infrastructure

- Pinpoint blockers and boosters contextual insights into which code patterns are likely to cause production issues and learn how to remediate them before migration.

- Visualise app to app dependencies to uncover inter application linkages that could break during migration.

4 Action

Migration plan

- Comprehensive modernisation strategy and plan to determine the best cloud service model and how to get there.
