

FAST START FOR FABRIC

As the digital landscape grows, organizations struggle with the complexity and cost of diverse products and services. Microsoft Fabric emerges as a comprehensive platform streamlining analytics for enterprises with features like automatic integration, a unified structure, centralized governance, and a user-friendly interface, addressing today's AI and data-driven challenges efficiently. To help organizations accelerate Fabric adoption, InCycle's Fast Start offers a context specific workshop and PoC that showcases modern data strategies and operationalization practices including medallion architectures, DataOps, security and governance.

Bring Your Own Data Layer, or Your Existing Data Lake

1. Choose your technology stack: Fabric - Synapse - Databricks - Snowflake*

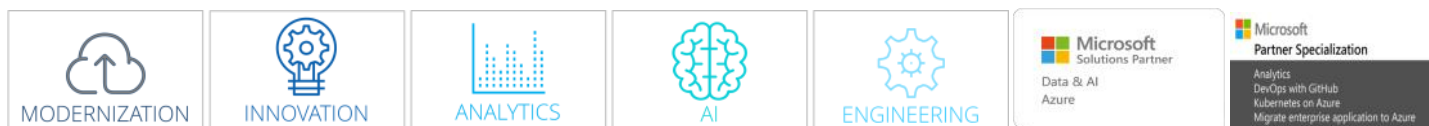

* Other potential data layers, e.g., Dynamics F&O, must be scoped separately

2. Choose your scenario: Gen AI, ML AI dev, Power BI dashboard

Experience our interactive workshop & PoC, tailored for those eager to explore Fabric's capabilities firsthand. This is a golden opportunity for customers interested in integrating their unique data layer or enhancing their current data lake with tools like Synapse, Databricks, and Snowflake. Our adaptable framework accommodates one of three distinct paths – Power BI, AI-driven Machine Learning, or cutting-edge GenAI – depending on your preference. Dive into a world where modern strategies, architectures, and practical applications come to life, emphasizing a lake-first approach, the Medallion model, DataOps, robust security, and comprehensive governance.

Fast Start is packaged and designed to realize value and match your goals:

1. Strategic perspective explores power of Fabric with inherent PoC flexibility.
2. Sets up your Fabric environment quickly, showcasing security and governance practices.
3. Enables your team on OneLake strategy and data design (i.e., Medallion architecture).
4. Accelerates Fabric implementation, minimizing time to production.

FAST START FOR FABRIC

Customer Experience

- Creates foundation for enterprise-grade modern data estate
- Targets your use case (your data source, your solution type)
- Delivers hands-on Fabric experience that bridges proficiency divide
- Showcases integrated clouds/services into a comprehensive and scalable framework
- Highlights “how to” medallion architecture
- Introduces role-specific capabilities for all data professionals
- Provides an advanced roadmap for harmonizing data and governance
- Establishes vision of unified single, definitive platform and source of truth

Next Steps

Microsoft, InCycle, and your dedicated project team will collaborate to accomplish the following tasks:

1. Develop statement of work (SoW)

- Confirm scope
- Review prerequisites
- Engagement team and responsibilities

2. Optional Microsoft Program/ Funding Request

- Created and submitted by InCycle
- 48 hour turnaround

3. Schedule engagement!
