

Keep underwriting work in motion

Indico is the Intake and Orchestration Platform that modernizes how underwriting work enters and moves through the enterprise.

Why submission handling breaks underwriting operations

Underwriting workbenches and pricing and quoting systems promise efficiency, but messy, inconsistent submissions prevent them from working as designed. Manual cleanup, enrichment, and routing upstream slow time-to-quote, drain capacity, and limit growth.

From chaos to clarity: How Indico automates underwriting

Indico automates underwriting operations by transforming messy, unstructured submissions into clean, system-ready work. The platform ingests submissions across channels, extracts and enriches key details, and routes complete work to the right teams and systems.

Eliminate workflow friction. Keep work moving downstream.

Ingest

Connects and extracts instantly.

Extraction Agents unbundle submissions, capturing data from emails, attachments, SoVs, loss runs, and more.

Enrich

Fills gaps, fast.

Enrichment Agents close gaps, classify details, and add context to create clean, structured data.

Orchestrate

Moves work where it belongs.

Orchestration Agents route complete, validated work to the right systems and teams, keeping work moving without manual coordination.

Chosen by the worlds leading insurers

Turn intake chaos into operational flow

Purpose-built for insurance operations

Indico adapts to how carriers actually operate. Agents flex to real processes, volumes and regional variation without forcing rigid workflows or constant reconfiguration. While newer platforms stall in pilots or require heavy rework, Indico is battle-tested across global carriers and production-scale workloads.

Safe, secure and built to scale

Indico operates securely inside enterprise underwriting environments, integrating with existing systems and scaling reliably across submission volumes, product lines, geographies, and teams.

Practical AI, built for production

Indico's AI supports real underwriting operations with human review, validation, and exception handling embedded directly into production workflows to increase speed while maintaining control.

Governance you can trust across the underwriting workflow

Indico provides traceable, auditable underwriting outputs with built-in data lineage, confidence scoring, and explainability so work moves fast without compliance risk.
