

# Technology for a better future

Transformation with Copilot,  
Microsoft's artificial intelligence

Each technological leap does not replace the previous one, it expands it.

**Microsoft 365 Copilot** is the natural next step in this evolution: an AI that not only executes, but thinks and proposes, transforming repetitive tasks into creative opportunities and redefining human and organizational potential.

# A clear and robust approach to maximising Copilot's potential

Technology that transforms businesses.

**Copilot experts,** technical knowledge and adoption experience to accompany you every step of the way

We rely on a tool that is already part of us. We make Copilot work for your team, maximizing its value from day one.

# Discover the power of Microsoft 365 Copilot

- Copilot is an AI-based tool designed to **improve the productivity** and efficiency of teams across the Microsoft suite.
- It combines large language models (LLMs), artificial intelligence (AI) algorithms that use deep learning techniques, and large data sets to **understand, summarize, predict, and generate content**.
- All of this is vitaminized with Microsoft Graph content and Microsoft 365 applications, that is, **integrated with the applications that are used every day** [Teams, Power Point, Outlook...]

## Meetings

- Summarize instantly
- Get insights in the moment
- Extract key points
- Collect commitments

## E-mail

- Compose emails quickly
- Adapt the tone you need
- Translate on the fly
- Summary of long threads

## Word

- Generate conclusions
- Plan and budget
- Write posts for social media
- Generate guides

## Power Point

- Create two summary slides
- Modify tone to suit
- Generate slides in real-time as you speak

## Excel

- Look for points of improvement
- Creating Charts
- Trend analysis
- Highlight important data

## Copilot allows you to continue growing

It adapts to your specific needs with intelligent agents and personalized assistants.

Access and interact with data in real time, connecting apps and workflows to unlock new opportunities and transform the way you collaborate.

# Multiple Copilot options: Unlocking the potential of generative AI has never been easier

## Copilot Chat

- Chat with context **web** (GPT-4o)
- Agents\*
- Image and code interpreter
- IT Controls

FREE\*

## Microsoft 365 Copilot

- Chat with **corporate** context (GPT-4o)
- Copilot in M365 applications (Teams, Outlook, Word, Excel, Powerpoint, etc.)
- Agents
- Copilot Control System
- Copilot Analytics

## Copilot Chat

## Copilot Studio

- Automation of tasks and processes
- Writing and reading data to third-party systems
- Native integration with enterprise applications (Power Platform)
- Multiple publishing channels (websites, mobile apps, Telegram, Whatsapp, Voice, etc.)

## Azure AI Foundry

- Advanced AI Model Customization
- Advanced Generative AI capabilities (real-time image interpretation, text-to-speech, speech-to-text, etc.)
- Granular security, privacy, and compliance control (proactive compliance monitoring, AI model auditing, etc.)

Makers

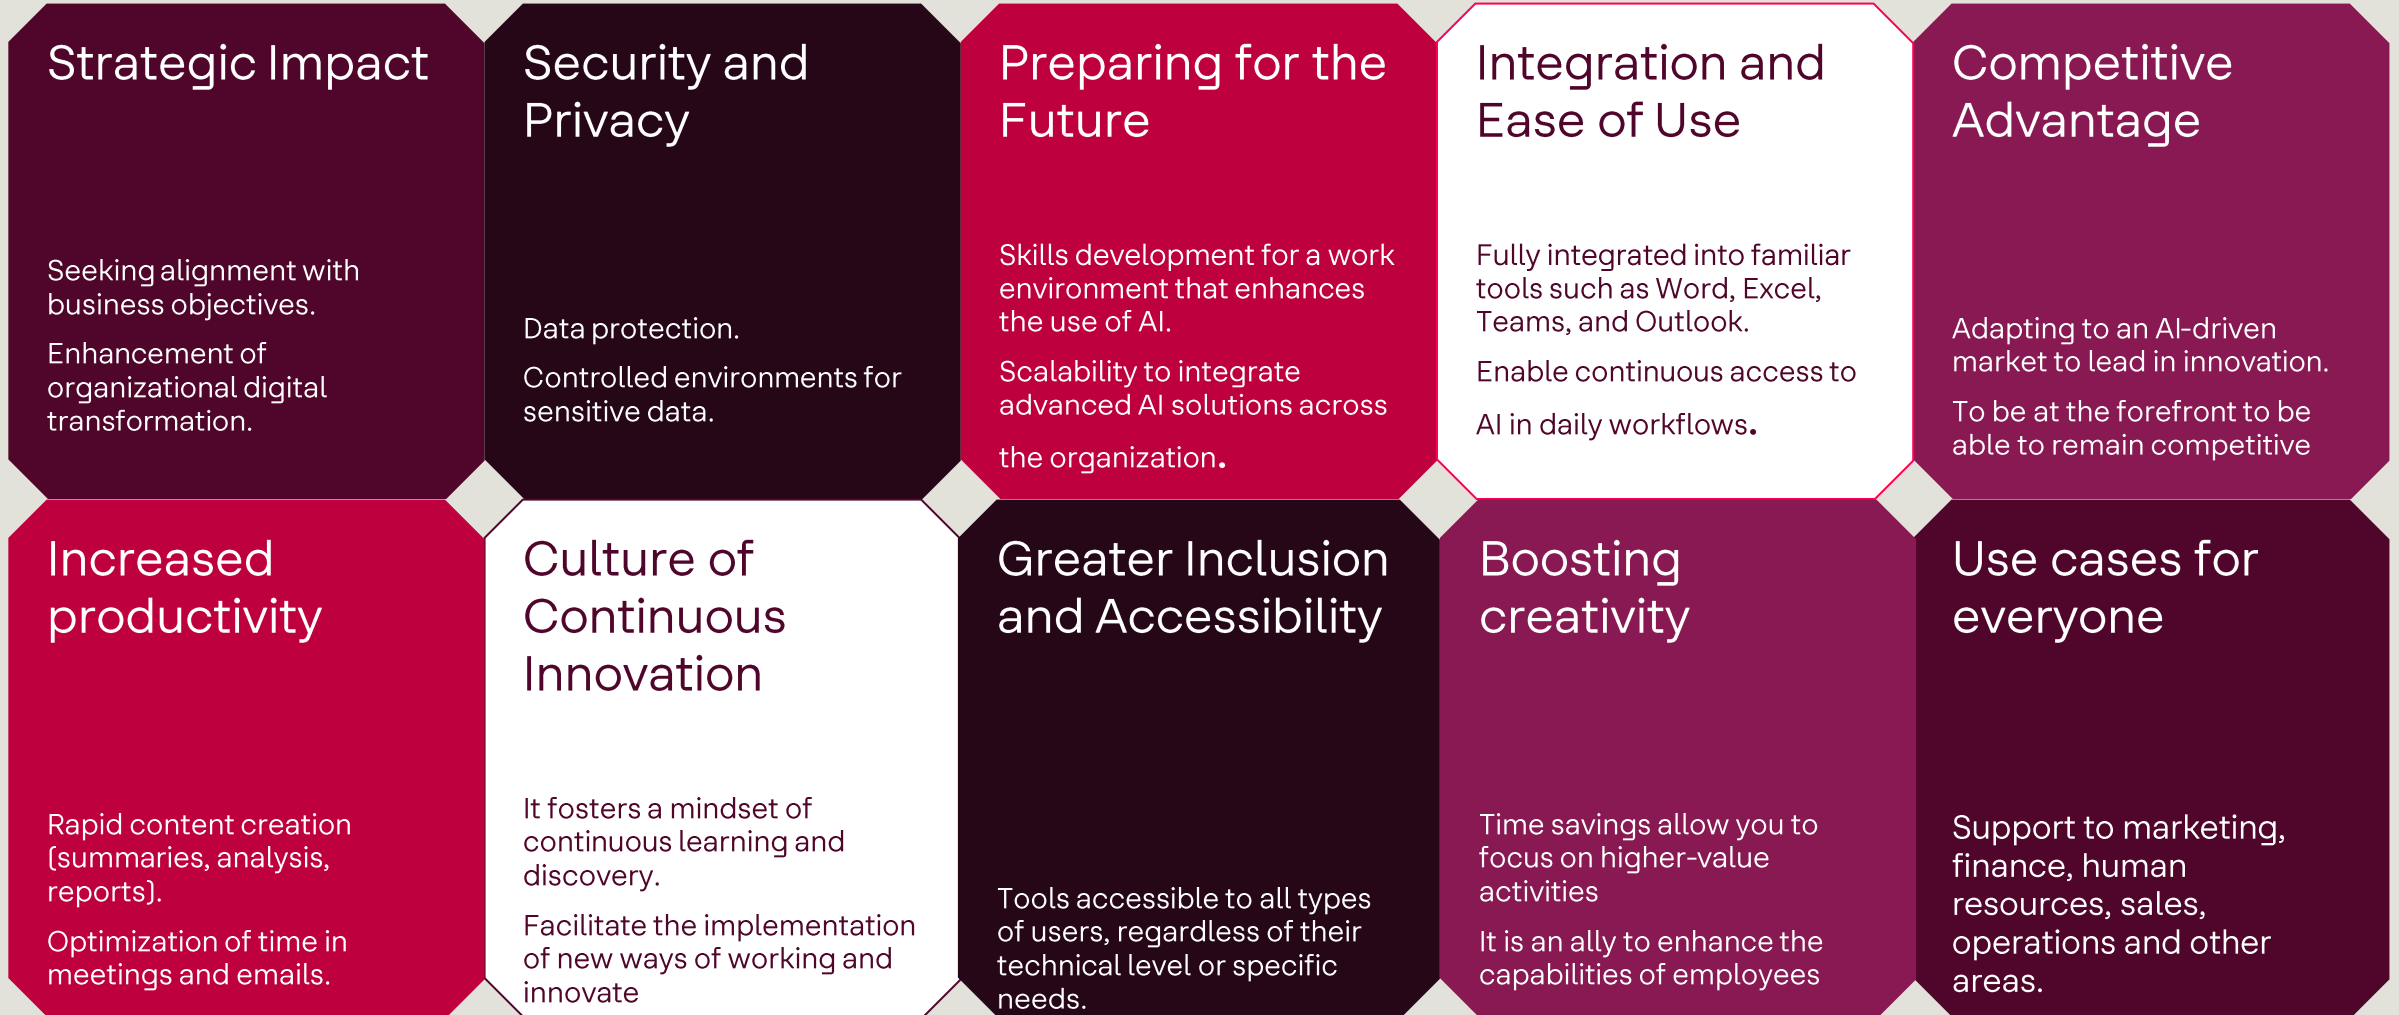

Developers

# What are agents?

An agent is a **customized, specific co-pilot**, designed by tailoring Copilot with **internal or external data**. Implementation is carried out through **natural language, low-code or more complex developments** with a clear objective: to **automate, optimize and facilitate the execution of processes**

# Benefits of the Copilot ecosystem

# Microsoft 365 Copilot is synonymous with trust

## Safety

Microsoft 365 Copilot only **presents data that each user can access** using the underlying controls in each Microsoft 365 service. What the user does not access will never be visible from Microsoft 365 Copilot

## Compliance

In line with **specific EU regulations** that prevent data from leaving the regional boundary. In constant compliance with the **General Data Protection Regulation**

## Privacy

Based on **Azure Open AI**, the content of messages that Microsoft 365 Copilot receives, data that is retrieved, and responses generated remain within the boundary of the organization's Microsoft 365 service

## Responsible AI

Aligned with the principles of **Fairness, Trustworthiness, Privacy, Inclusion, Transparency, and Accountability** that Microsoft puts into practice through governance, policy, and research

Your data is **your** data

Your **data is not shared** with anyone or used to train AI models

Your data is protected with the **highest security** and compliance standards

# Our greatest reference is us

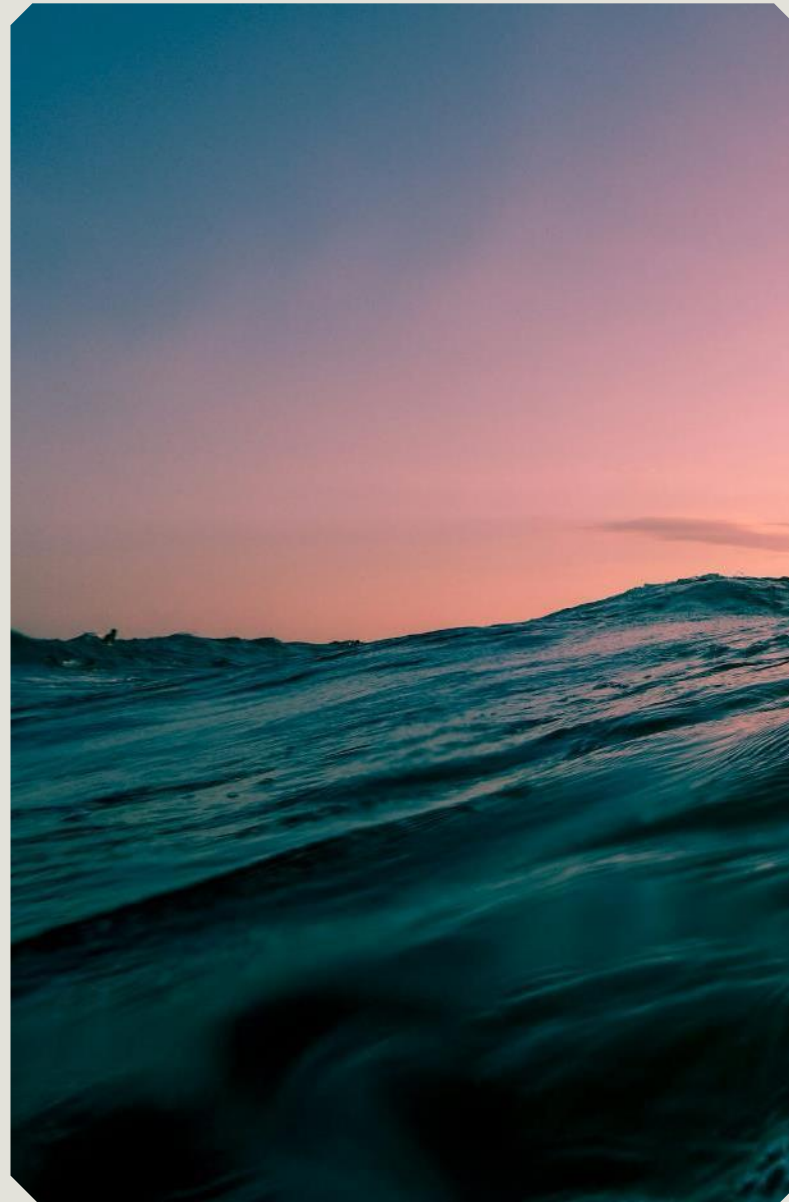

- In 2024, Indra created a pilot to launch Copilot on M365.
- A program that has allowed the company to learn, grow and revolutionize.
- Use cases found for the different profiles
- Early adopters, champions and superchampions programme underway

Redefining the potential of people and organizations

# Where is **your organization** in the way of Microsoft 365 Copilot?

# Global vision of Minsait services

Minsait has developed advanced services to facilitate the adoption and effective implementation of Copilot, ensuring a digital transformation adapting to the needs of the organization.

## PrismaCopilot

Facilitates the initial adoption of AI, laying the groundwork for progressive digital transformation

## SmartCopilot

Ensures effective AI integration and fosters a long-term culture of innovation

## XPANDCopilot

Take AI to the next level, ensuring its lasting adoption and maximum impact by creating custom agents

## Hackathons

Foster innovation and collaboration within the organization, allowing employees to work together on creative and challenging projects with Copilot
