

Secrets management on autopilot

How does Infisical work?

Infisical is an all-in-one secret management platform for developers. It helps organizations manage secrets (e.g., API-keys, database access tokens, certificates) and application configuration across infrastructure.

Local Development

- Developer on/off-boarding
- Secret Handling on Local Machines
- Infisical CLI
- Self-serve Dashboard UI
- Secret Scanning and Leak Prevention
- Secret Sharing

Staging/CI/CD/Testing

- Integrations with CI/CD tools (e.g., GitHub Actions and Jenkins)
- Integrations with Infrastructure-as-code tools (e.g., Pulumi, Terraform)

Production

- Integrations with Infrastructure tools (e.g., Docker, Kubernetes)
- Official Native SDK Libraries (Node.js, Java, etc.)
- Dynamic Secrets and Secret Rotation
- Infisical Agent
- Approval Workflows, JIT Access, Access Requests
- Multi-cloud Auth Methods
- Certificate Management across infrastructure

Integrations

- 60+ integrations with the leading infrastructure/developer tools and frameworks.
- 6+ SDKs for Node.js, Python, etc.
- Ability to create additional custom integrations on your own or with the help of the core Infisical team.
