INFORMATIKA

Microsoft Azure Arc Management

Informatika supports organizations with Microsoft Azure expertise to produce improvements and new values in way to expand layers of complexity for IT teams. We are offering help to connect different platforms in single management interface for monitoring and securing infrastructures. One of many purposes of Azure Arc centralized console is onboarding non-Azure resources to Azure.

Microsoft Azure Arc simplifies the use of edge, on-premises and multi-cloud environments by offering Azure resources on any type of platform and without influence of platform's location. With that possibility we can also accelerate your applications modernization and indicate on the total value of usage Azure Arc integration platform. Enablement expertise from our cloud team and relationship with Microsoft organization can support clients invest in Azure Arc very fast and with sophisticated strategy.

Azure Arc platform is giving opportunity to onboard resources hosted outside of Azure and together with Azure resources to manage and secure them all like normal Azure resources. In this way, beside using multiple consoles for managing organization will use only one console for these tasks. Servers, Kubernetes clusters, Data Services and SQL Server are types of resources for Azure Arc onboarding outside of Azure platform.

Deliverables

- A workshop for understanding exact situation of customer and value of Azure Arc
- Unfold Azure Arc for Servers enabled concepts, features and use cases
- Implementation of Microsoft Azure Arc server agents to non-Azure servers
- Configuration of metrics and logging agents on non-Azure platform
