

A DATA-DRIVEN DIGITAL APPLICATION FOR FINANCIAL DOCUMENT VERIFICATION AND DATA SHARING

DISCOVER | EXTRACT | VALIDATE | PUBLISH

What is DataVerify

DataVerify is an easy to use, real time web-based data-driven application for account reconciliation and verification.

DataVerify can, in a few seconds, validate the contents of a receipt or invoice against a bank transaction, eliminating the need for time consuming invoice matching, transaction reconciliation and expense verification.

At the heart of DataVerify is a powerful and near accurate character recognition function that includes handwritten recognition.

How can DataVerify help you

DataVerify is an easy to use, real time data verification application focused on enabling organisation streamline their accounting processes.

DataVerify can immediately verify a receipt against a transaction eliminating the need for time consuming invoice matching, transaction reconciliation and expense verification.

Using DataVerify organisations can empower internal staff and external clients to verify payments against a transaction, paying an invoice, collecting receipts for expenses or VAT returns and matching company credit card expenses – all in real time.

Utilising DataVerify powerful data capture feature pertinent data can be identified and automatically extracted and validated it against bank transactions, allowing manual override as needed.

Benefits

Text Extraction

Improves data quality quickly and easily, reducing manual input and eliminating mistakes.

Data Matching

Rapid data discovery allowing you to focus on other tasks.

Real Time

Allows you to verify data and maintain data accountability, delivering more accurate reporting and analysis.

Machine Learning Capability

Ability to learn from corrections made in the editor.
