Navigate your next

Infosys Inventory Management Solution Offering on D365 Business Central enables enterprises to view and manage inventories in a fingertip through visually rich interface which is accessible from both mobile and desktop.

Challenges

Managing inventory is crucial for all aspects of a business. Pertinent inventory management can lead to an enhanced competitive advantage and improved organizational performance. Lack of capability in EPR software of providing notifications about certain events or change in status, such as available inventory is lower than the quantity you are about to sell. Inventory manager has to login each time into ERP systems and manually check inventory and re-order quantity to raise Purchase Order.

✓ Lack of real time alerts for low inventories,

✓ Inventory Manager must perform recurrent task of logging and checking re-order quantity.

Ideal Solution

Infosys Inventory Management Solution enables enterprises to view and manage inventories in a fingertip through visually reach interface which is accessible from both mobile and desktop. It leverages data from D365 Business Central, improve overall efficiency of managing inventories, enables approval through Microsoft Teams.

This solution help enterprise to optimize inventory levels and ensure item availability across multiple channels. The primary objective of this solution is to ensure there is enough goods or materials to meet demand without creating overstock, or excess inventory.

Desired Outcomes

✓ Allow inventory managers to track inventories on the go through proactive alerting

✓ Integrated approval workflow within MS Teams for seamless collaboration

✓ Realtime integration with D365 Business Central

✓ Comprehensive data model to support integration with other ERP
