# InfoTech Health Check Application

Overview:

As the world copes with the COVID-19 pandemic, InfoTech build cloud solutions for organizations to help coordinate and automate emergency responses.

InfoTech COVID-19 Health Check Application built on MS Power Apps & SharePoint Online Platform and integrated with MS Teams. The purpose of application for Caring Employee health and wellbeing is on priority. Application purpose to provide better plan, for see and implement safety procedures for COVID-19. This application is accessible from Mobile and from MS Teams.

InfoTech COVID-19 Health Check Application asks questions about symptoms, recent travel, and contact you may have had with people who have had or been exposed to the virus. After that, you will be taken to a page with recommended next steps.

We are releasing the first version of that solution for any customer organization to quickly implement. The solution combines capabilities of Power Apps, Power Automate, Teams, and SharePoint. It can be used on the web, mobile or in Teams.

InfoTech COVID-19 Health Check Application is designed to help companies manage the crisis within their walls, both physical and virtual. More data and information about who's sick and who needs help bring a small modicum of assurance, even as the virus's horrifying spread continues.

Key Features:

- Employees can report their work status (e.g., working from home. This helps managers coordinate across their teams and helps central response teams track status across an organization.

- Robust tracking, reporting, and notifications for health checks completed at the unit, area and enterprise level.
- Proactive alerts for above-unit managers related to failed health checks.
- Log custom actions to indicate whether an employee was sent home or another step was taken.
- Reports: The reporting breaks down: location, symptom & operational data.
- Analytics
- Management Dashboard
- Email Notification to HR and Admin
