How does this work?

Step 01 — **Initiate Delivery Request**

An employee formally requests approval for a delivery request (pick up or drop off) with details of the delivery

Step 02 — **Delivery Authorization**

Following the submission of a delivery request, the logistic manager reviews and either approves or rejects the request

Step 03 — **Delivery Coordination**

Upon approval the approved delivery is handed over to the Transport Coordinator (Human or Bot), responsible for organizing and coordinating the necessary arrangement

Once the delivery logistics are finalized, notifications containing relevant delivery details are dispatched to all the parties including the sender, assigned driver and the receiver via SMS or E-mail

The driver can log into the mobile application and receive necessary information to pick up and drop off the delivery items during the voyage

Upon delivery confirmation, all relevant delivery information becomes accessible to Finance and HR for decision making purposes. Scanning, release papers document uploads

Step 04 — **Notification Dispatch**

Step 05 — **Driver Information Access**

Step 06 — **Reporting and Accessibility**

Streamline your logistics and gain full control over your deliveries with Transpomate!
