3

4

5

6

7

8

9

- Typically, we begin with a discovery phase to gain a thorough understanding of your requirements.
- Based on that, we propose suitable solutions and provide a demo within the environment, allowing you to see how your processes align with the system.
- We also prepare documentation, including a Statement of Work (SOW), and share a detailed breakdown of estimates and timelines before starting the implementation of a particular phase.
- Unlike the traditional waterfall model, we follow Agile and Scrum methodologies for implementation, **using tools DevOps, JIRA, Pivotal Tracker etc.**
- We assist you in prioritizing work items and deliver a Minimum Viable Product (MVP) in the initial deployment itself.
- This enables your team to start using the system early, while we continue to roll out additional features in subsequent phases
- Regular stand-ups, either daily or once every two days.
- Stake holders from Client end must be present and respond to us promptly to help ensure the success of this project.
- Retrospective meetings or retros, every fortnight.
