

Innofactor Security Assessment

INNOFACTOR®

With Microsoft 365 security assessment the customer gets insights and recommendations to help minimizing security risks.

Strengthen security

- Security insights from security analysts
- Detect possibilities to improve your security posture
- Reduce security risks by adopting security best practices to mitigate threats

Best Practice

- Security and governance best practices from Microsoft and Innofactor
- Customer's IT team can govern M365 in a secure way.

Why is it for you?

- Need to protect data in M365
- Need to protect identities and devices
- Better control over who has access and how
- Better control over what users can do with company data

License Benefits

- Optimize Microsoft 365 usage and cost by leveraging the benefits of your license
- Finding the right licensing scenarios. Invest in what you need, and use what you have invested in.

“Customers often ask how safe it really is to migrate to the cloud. Is having everything out there on the net sufficiently secure? Is there sufficient control? The answer is that migrating your identity, email and personal folders to the cloud brings lots of new security-related features, providing more security than an in-house data center” says **Nils Olav Aasen, Chief Solutions Architect at Marin IT (4,500 cloud users across a global fleet with 70+ ships)**
